

## DESCRIPTION

The EV3394S-S-00A is an evaluation board for the MP3394SGS, a step-up converter designed for liquid-crystal displays that employ an array of LEDs as the light source. It can drive up to 4 strings LEDs in parallel with 200mA/string maximum current.

The MP3394S uses external power MOSFET and internal current mode, fixed frequency architecture and includes current ballast in each string terminal, which achieves 2.5% current regulation accuracy between strings. Low feedback voltage at each LED string help reduce power loss and improve efficiency.

The MP3394S has multiple features to protect the converter from fault conditions, including under-voltage lockout, current limiting, over voltage, short LED, open LED and thermal shut-down protection.

## ELECTRICAL SPECIFICATIONS

Parameter	Symbol	Value	Units
Input Voltage	$V_{IN}$	8 – 28	V
LEDs #		4 LED string 12 LEDs/string	
LED Current	$I_{LED}$	120/string	mA

## FEATURES

- 4 String, Max 200mA/String WLED Driver
- 8V to 28V Input Voltage Range
- 2.5% Current Matching Accuracy Between Strings
- Programmable Switching Frequency
- PWM or DC Input Burst PWM Dimming
- Open and Short LED Protection
- Programmable Over-Voltage Protection
- Cascading Capability with a Single Power Source
- Under Voltage Lockout
- Thermal Shutdown

## APPLICATIONS

- Notebook PC
- LCD Monitor
- LCD TV
- Handy Terminals Display
- Automotive Systems and Tablet Computer

All MPS parts are lead-free and adhere to the RoHS directive. For MPS green status, please visit MPS website under Quality Assurance. "MPS" and "The Future of Analog IC Technology" are Registered Trademarks of Monolithic Power Systems, Inc.

## EVB TEST RESULTS

Performance waveforms are tested on the evaluation board.

$V_{IN} = 12V$ , 10LEDs in series 4 strings, 120mA/string, unless otherwise noted.

Efficiency vs.  $V_{IN}$

Steady State

$V_{IN}$  Power On

EN Power On

DC Burst Dimming

$V_{DIM} = 0.3V$ ,  $C_{BOSC} = 1.5nF$

External PWM Dimming

$f_{PWM} = 200Hz$ ,  $D_{PWM} = 50\%$

Open LED Protection

Open all LED string at working

Open LED Protection

Open one LED string at working

Short LED Protection

Short  $V_{OUT}$  to LEDx at working

PRINTED CIRCUIT BOARD LAYOUT

Figure 1—Top Layer

Figure 2—Bottom Layer

## QUICK START GUIDE

1. Connect the positive and negative terminals of the load panel (12 white LEDs in series, 4 strings) to the LED+ and LED1~4 pins on the EV board, respectively.
2. Connect the positive and negative terminals of the power supply (8V ~ 28V) to the VIN and GND pins on the EV board, respectively.
3. Drive EN pin high (5V) to enable the MP3394.
4. For PWM dimming, apply a PWM rectangular waveform with a minimum voltage less than 0.5V and a maximum greater than 1.2V on DIM pin. The frequency of the PWM signal is recommended between 100Hz to 20kHz.
