# EV1529DR-00A

## Fixed Frequency Step-Up Converter LCD Backlight Plus Flash Evaluation Board

### GENERAL DESCRIPTION

The EV1529DR-00A evaluation board is designed to drive 2 strings of up to 4 backlight LEDs to 30mA and a 4-LED flash string to 150mA from a single Lithium-Ion battery. The board is set up to obtain 20mA backlight current, 40mA preview current and 100mA flash current. All the LED currents can be adjusted by resistors RS1, RS2, and RS3 on the evaluation board.

The MP1529 switches at 1.2MHz and allows the use of tiny, low cost capacitors and small inductors. High frequency PWM dimming is made possible through EN1. The MP1529 includes built-in open-LED over-voltage protection, cycle-by-cycle current limit, over-temperature shutdown, input under-voltage control and integrated soft-start.

### ELECTRICAL SPECIFICATIONS

Parameter	Symbol	Value	Units
Supply Voltage	V <sub>IN</sub>	2.7-4.2	V
LED Current (Backlight)	I <sub>LED_BL</sub>	20	mA
LED Current (Preview)	I <sub>LED_PV</sub>	40	mA
LED Current (Flash)	I <sub>LED_FL</sub>	100	mA

### FEATURES

- High Efficiency
- 2.7V to 4.2V Input Voltage Range
- Tiny Capacitors and Inductors Due to 1.2MHz Fixed Frequency Operation
- LCD Backlight to 30mA, Flash to 150mA
- Independent Backlight, Preview and Flash Current Adjustment
- High Frequency PWM Dimming
- Surface-Mount Components
- Fully Assembled and Tested

### APPLICATIONS

- PDAs
- Cellular Phones
- Digital Still Cameras
- Digital Video Cameras

"MPS" and "The Future of Analog IC Technology" are Trademarks of Monolithic Power Systems, Inc.

## QUICK START GUIDE

The LED currents at backlight mode, backlight plus review mode and flash mode are set to 20mA, 40mA, and 100mA, respectively on this board. The board layout accommodates mostly common used inductors and output capacitors.

1. Preset Power Supply to  $2.7V \leq V_{IN} \leq 4.2V$ .
2. Turn Power Supply off.
3. Connect Power Supply terminals to:
  - a. Positive (+): VIN
  - b. Negative (-): GND
4. Solder the first backlight LED string to LED1 - LED4.

Solder the second backlight LED string to LED5 – LED8.

Solder the flash LED string to LED9 – LED12.

Set EN1 and EN2 based on the Enable Operation Table below. Connect EN1, EN2 to VIN to set them “H” and to GND to set them “L”.

Mode	EN1	EN2	Strings 1+2: LCD Backlight LEDs	String 3: Flash LEDs
Off	L	L	Off	Off
Backlight	H (PWM)	L	On (PWM)	Off
Backlight plus Preview	H (PWM)	H	On (PWM)	Preview current
Flash	L	H	Off	Flash current

5. Turn Power Supply on after making connections.

The LED currents can be adjusted by changing the values of resistors RS1, RS2, and RS3.  $V_{SET} = 1.216V$ .

$$RS1 = \frac{950 \times V_{SET}}{I_{LED\_BL}}$$

$$RS2 = \frac{1100 \times V_{SET}}{I_{LED\_PV}}$$

$$RS3 = \frac{1000 \times V_{SET}}{I_{LED\_FL}}$$

For examples, If  $I_{LED\_BL} = 10mA$ , then

$$RS1 = \frac{950 \times 1.216}{10} = 115.52k\Omega \text{ (Use a } 115k\Omega \text{ 1\% resistor)}$$

If  $I_{LED\_PL} = 20mA$ , then

$$RS2 = \frac{1100 \times 1.216}{20} = 66.88k\Omega \text{ (Use a } 66.5k\Omega \text{ 1\% resistor)}$$

If  $I_{LED\_FL} = 150mA$ , then

$$RS3 = \frac{1000 \times 1.216}{150} = 8.11k\Omega \text{ (Use a } 8.06k\Omega \text{ 1\% resistor)}$$
