

DESCRIPTION

The EV2212DQ-00A is an evaluation board for the MP2212DQ, a monolithic synchronous buck regulator.

This EV board can deliver 3A continuous load current over an operating input voltage 3V to 16V. High efficiency power conversion is achieved through the use of synchronous rectification techniques. The output is adjustable over a range of 0.8V to 0.9xV_{IN} by means of an external resistor from FB pin to ground.

Current mode control is implemented, which provides fast transient response and cycle-by-cycle current limiting. The EV board will go into hiccup mode to protect against over current/short circuit.

This EV board can be turned on or shut down via a remote ON/OFF input that is referenced to ground. This input is compatible with popular logic devices. Built-in soft-start prevents inrush current at turn-on.

ELECTRICAL SPECIFICATIONS

Parameter	Symbol	Value	Units
Input Voltage	V _{IN}	3–16	V
Supply Voltage	V _{CC}	2.5– 6	V
Output Voltage	V _{OUT}	1.8	V
Output Current	I _{OUT}	3	A

FEATURES

- 3A Output Current
- 3V to 16V Operating Input Range
- Adjustable Output from 0.8V to 0.9xV_{IN}

APPLICATIONS

- μP/ASIC/DSP/FPGA Core and I/O Supplies
- Printers and LCD TVs
- Network and Telecom Equipment
- Point of Load Regulators

"MPS" and "The Future of Analog IC Technology" are Registered Trademarks of Monolithic Power Systems, Inc.

QUICK START GUIDE

1. Connect the positive and negative terminals of the load to the VOUT and GND pins, respectively.
2. Preset the power supply output (VIN supply) to 3V-16V, then turn it off.
3. Connect the positive and negative terminals of the power supply output to the VIN and GND pins, respectively.
4. Apply 3.3V-5V DC voltage to VCC and GND pins. Turn the power supply (VIN supply) on. The EV2212DQ will automatically startup.
5. To use the Enable function, apply a digital input to the EN pin. Drive EN higher than 1.6V to turn on the regulator, drive EN less than 0.4V to turn it off.
6. Use R1 and R2 to set the output voltage with $V_{FB} = 0.8V$. Follow the Application Information section in the device datasheet to select the proper value of R1, R2, inductor and output capacitor values when output voltage is changed.
