

DESCRIPTION

The EV2362DF-01A is an evaluation board for the MP2362, a dual monolithic step-down switch mode converter with built-in internal power MOSFETs.

The MP2362 achieves 2A continuous output current for each output over a wide input supply range with excellent load and line regulation. Each channel can be independently synchronized to a frequency up to 1.2MHz.

Current mode operation provides fast transient response and eases loop stabilization.

Fault condition protection includes cycle-by-cycle current limiting and thermal shutdown. In shutdown mode the regulator draws 40µA of supply current.

FEATURES

- 2A Current for Each Output
- Stable with Low ESR Output Ceramic Capacitors
- Wide 4.75V to 23V Operating Input Range
- Configurable for Single Output with Double the Current
- Fully Assembled and Tested

APPLICATIONS

- Distributed Power Systems
- I/O and Core supplies
- Set Top Boxes
- Cable Modems

"MPS" and "The Future of Analog IC Technology" are Registered Trademarks of Monolithic Power Systems, Inc.

ELECTRICAL SPECIFICATION

Parameter	Symbol	Value	Units
Input Voltage	V _{IN}	4.75 – 23	V
Output Voltage A	V _{OUTA}	3.3	V
Output Voltage B	V _{OUTB}	2.5	V
Output Current	I _{OUT}	2	A

EV2362DF-01A EVALUATION BOARD

(L x W x H) 2.2" x 1.6" x 0.5"
(5.6cm x 4.0cm x 1.2cm)

Board Number	MPS IC Number
EV2362DF-01A	MP2362DF

EV2362DF-01A BILL OF MATERIALS (continued)

Qty	Ref	Value	Description	Package	Manufacturer P/N
2	R3A, R3B	6.8kΩ	Resistor	0603	Any
2	R4A, R4B	NS	Not Stuffed		
2	R5A, R5B	0Ω	Resistor	0603	Any
2	R6A, R6B	NS	Not Stuffed		
2	R7A, R7B	47Ω	Resistor	0603	Any
2	R8A, R8B	NS	Not Stuffed		
1	U1		Dual Step-Down Converter	TSSOP20	MPS: MP2362DF

QUICK START GUIDE

The output voltages of this board are set to 3.3V (V_{OUTA}) and 2.5V (V_{OUTB}). The board layout accommodates most commonly used inductors and output capacitors.

1. Attach the positive and negative ends of the first load to the V_{OUTA} and GND pins, respectively. If using both outputs, attach the positive and negative ends of the second load to the V_{OUTB} and GND pins, respectively.
2. Preset the power supply output to 4.75V to 23V and turn it off.
3. Connect the positive terminal of the power supply output to the VIN pin and the negative terminal of the power supply output to the GND pin.
4. Turn the power supply on. The MP2362 will automatically startup.
5. To use the Enable function, apply a digital input to EN pin. Drive EN higher than 2.5V to turn on the regulator and less than 0.7V to turn it off.
6. The Output Voltages V_{OUTA} and V_{OUTB} can be changed by varying R1A and R1B, respectively.

Calculate the new values by the following formulae:

$$R1A = R2A \times \left(\frac{V_{OA}}{V_{FB}} - 1 \right), \quad R1B = R2B \times \left(\frac{V_{OB}}{V_{FB}} - 1 \right)$$

Where V_{FB}=1.222V, R2A = 10kΩ and R2B = 10kΩ.

Example:

For V_{OUTA} = 3.3V:

$$R1A = R2A \times \left(\frac{V_O}{V_{FB}} - 1 \right) = 10k\Omega \times \left(\frac{3.3}{1.222} - 1 \right) = 17k\Omega$$

the closest standard 1% value.

7. To use the soft-start function for V_{OUTA}, stuff R4A with a 100kΩ resistor, R6A with a 390kΩ resistor, R8A with 560kΩ resistor, C8A with a 100nF capacitor and D3A with a 1N4148. Follow the same procedure for V_{OUTB} (ie. Stuff R4B with a 100kΩ resistor, etc).
8. For synchronization to an external clock, please refer to the MP2362 datasheet.
