

## DESCRIPTION

The EV2365DN-01A is an evaluation board for the MP2365, a 1.4MHz step-down regulator with a built-in POWER MOSFET.

The MP2365 integrates a 120mΩ MOSFETS that provides 3A continuous load current over a wide operating input voltage of 4.75V to 28V.

Current mode control provides fast transient response and eases loop stabilization. An adjustable soft-start prevents inrush current at turn-on.

This device, available in an 8-pin SOIC and PDIP packages, provides a very compact system solution with minimal reliance on external components.

## ELECTRICAL SPECIFICATIONS

Parameter	Symbol	Value	Units
Input Voltage	$V_{IN}$	4.75 – 28	V
Output Voltage	$V_{OUT}$	3.3	V
Output Current	$I_{OUT}$	3	A

## FEATURES

- 3A Output Current
- Wide 4.75V to 28V Operating Input Range
- Adjustable Output from 0.92V to 21V
- Fully Assembled and Tested

## APPLICATIONS

- Distributed Power Systems
- Battery Chargers
- Pre-Regulator for Linear Regulators

"MPS" and "The Future of Analog IC Technology" are Trademarks of Monolithic Power Systems, Inc.

## EV2365DN-01A EVALUATION BOARD

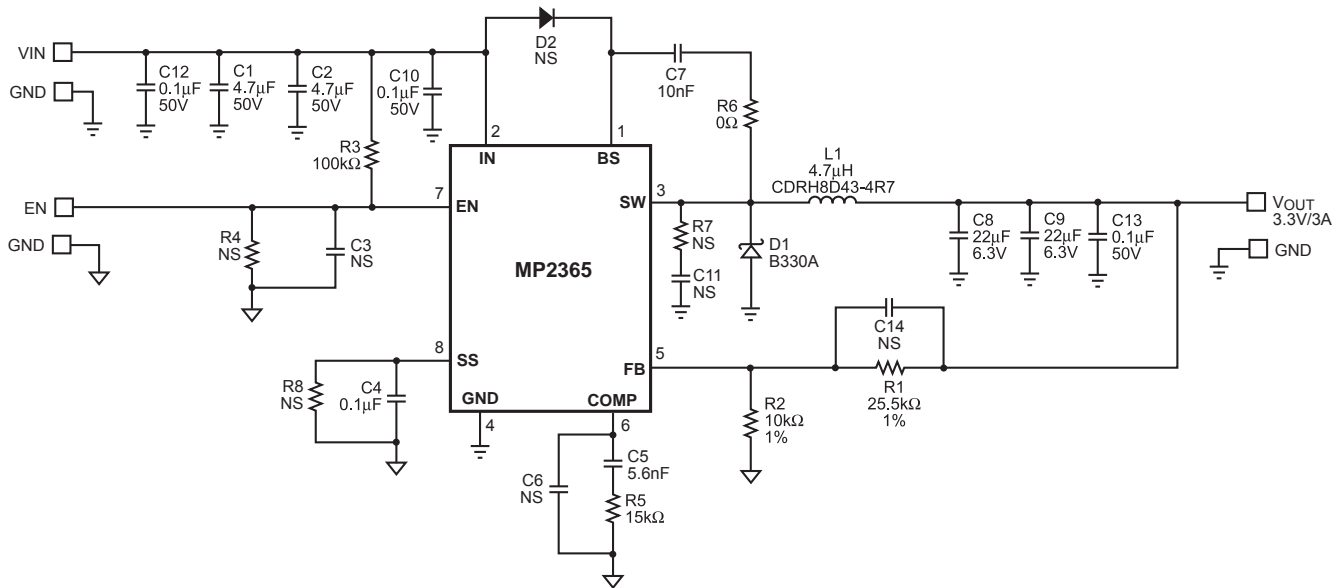

(L x W x H) 2.0" x 1.9" x 0.5"  
(5.0cm x 4.8 x 1.2cm)

## QUICK START GUIDE

1. Connect the positive and negative terminals of the load to the VOUT and GND pins, respectively.
2. Preset the power supply output to between 4.75V and 28V, then turn it off.
3. Connect the positive and negative terminals of the power supply output to the VIN and GND pins, respectively.
4. Turn the power supply on (the MP2365 will automatically startup).
5. To use the Enable function, apply a digital input to the EN pin. Drive EN higher than 2.9V to turn on the regulator or less than 0.9V to turn it off.
6. An under voltage lockout (UVLO) function can be implemented by the addition of a resistor divider (R3 and R4). The Enable threshold is 2.6V, so the VIN UVLO threshold is:

$$\left(1 + \frac{R3}{R4}\right) \times 2.6V.$$
