## QUICK START GUIDE

1. Confirm the jumpers are connected correctly. For Buck applications short “JP1”, open “JP2”; and for Buck-boost applications, short “JP2”, and open “JP1”.
2. Check the LED string voltage and preset the input voltage power supply.
3. Set a second power supply as the power supply for “EN/DIM”.
4. Turn-off all power supplies. Connect all the power supply.
5. Connect the anode of the LED string to LED+, and the cathode to LED-.
6. Turn on the power supplies. The LED string should be lighten
7. To demo analog dimming function, adjust the second power supply which connects to “EN/DIM” connector from 0.6V to 1.6V, the amplitude of LED current is from 0% to 100% of maximum LED current.
8. To demo the PWM dimming function: apply a 100Hz-to-2kHz square wave signal with amplitude greater than 1.6V to ”EN/DIM”
9. For combined analog and PWM dimming, apply a 100Hz to 2kHz square wave signal with amplitude from 0.6V to 1.6V.
10. The EVB is also compatibles with step-up application. For step-up application, short “JP2”, open “JP1”, connect LED load to “LED+\_Boost” and “LED-”.
