EV2499A-QB-00A

High Efficiency, 3A Max, 36V Synchronous, Step-Down Converter Evaluation Board

DESCRIPTION

The EV2499A-QB-00A is an evaluation board for MP2499A, a synchronous rectified, step-down module converter with built-in power MOSFETs.

The evaluation board can deliver a 3A max continuous output current with excellent load and line regulation over a wide input supply range.

Current-mode operation provides fast transient response and eases loop stabilization.

Full protection features include over-current protection and thermal shut down.

The MP2499A requires a minimal number of readily-available standard external components, and is available in a space-saving QFN-13 (2.5mmx3mm) package.

ELECTRICAL SPECIFICATION (1)

Parameter	Symbol	Value	Units
Input Voltage	V_{IN}	12	V
Output Voltage	V_{OUT}	5	V
Output Current	I_{OUT}	2.4	A

Notes:

1) For different input, output spec, please refer to APPLICATION and TYPICAL APPLICATION CIRCUITS section on datasheet to choose proper values

.

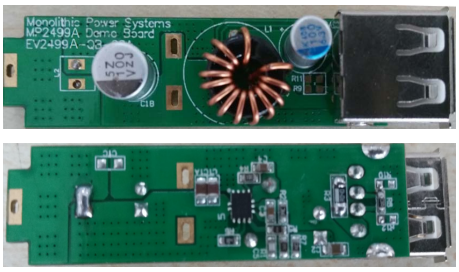
FEATURES

- Wide 5V to 36V Continuous Operating Input Range
- 85mΩ/55mΩ Low $R_{DS(ON)}$ Internal Power MOSFETs
- High-Efficiency Synchronous Mode Operation
- Default 270kHz Switching Frequency
- Synchronizes to a 200kHz to 2.4MHz External Clock
- Internal Soft-Start
- Output Line Drop Compensation
- Accurate Continuous Output Current Limit with External Resistor
- OCP Protection and Hiccup
- Thermal Shutdown
- Output Adjustable from 0.8V
- Available in an QFN-13 (2.5mmx3mm)

APPLICATIONS

- USB Dedicated Charging Ports (DCP)
- Automotive Cigarette Lighter Adapters
- USB Chargers
- USB PD Applications

EV2499A-QB-00A EVALUATION BOARD



(L × W × H) 5.5cm x 1.4cm x 1.1cm

QUICK START GUIDE

1. Connect the positive and negative terminals of the load to the VOUT and GND pins, respectively.
2. Preset the power supply output between 6.5V and 36V, and then turn off the power supply.
3. Connect the positive and negative terminals of the power supply output to the VIN and GND pins, respectively.
4. Turn the power supply on. The board will automatically start up.
5. To use the Enable function, apply a digital input to the EN/SYNC pin. Drive EN higher than 1.4V to turn on the converter, or less than 1.25V to turn it off.
6. To use the external synchronous function to adjust the switching frequency, apply an external clock signal to EN/SYNC pin.
