

### DESCRIPTION

The EV2623-R-00A is an evaluation board for the MP2623, a high performance 1-2 cell LiFePO<sub>4</sub> battery switching charger with the built-in internal power MOSFET.

EV2623-R-00A achieves up to 2A charge current over a wide input supply range. The charge current can be programmed by sensing the current through an accurate sense resistor.

MP2623 regulates the charge current and full charge voltage using two control loops to realize high accuracy CC charge and CV charge.

Fault condition protection includes time out control, battery full terminated control, thermal protection, battery temperature monitoring and protection. The board also indicates AC adapter power good and charge status indications to the system.

### ELECTRICAL SPECIFICATION

Parameter	Symbol	Value	Units
Input Voltage	V <sub>IN</sub>	5-24	V
Charge Current	I <sub>CHG</sub>	2	A

### FEATURES

- Charge 1-, 2- Series LiFePO<sub>4</sub> Cell
- Wide Operating Input Range
- Up to 2A Programmable Charging Current
- ±0.75% V<sub>BATT</sub> Accuracy
- Up to 90% Efficiency
- Fixed 1.1MHz Frequency
- Preconditioning for fully depleted batteries
- Charging Operation Indicator
- Input Supply and battery fault indicator
- Thermal Shutdown
- Battery Temperature Monitor and Protection

### APPLICATIONS

- Power Tools and Portable Equipment
- Handheld Terminals
- LiFePO<sub>4</sub> Battery Chargers

All MPS parts are lead-free and adhere to the RoHS directive. For MPS green status, please visit MPS website under Quality Assurance. "MPS" and "The Future of Analog IC Technology" are Registered Trademarks of Monolithic Power Systems, Inc.

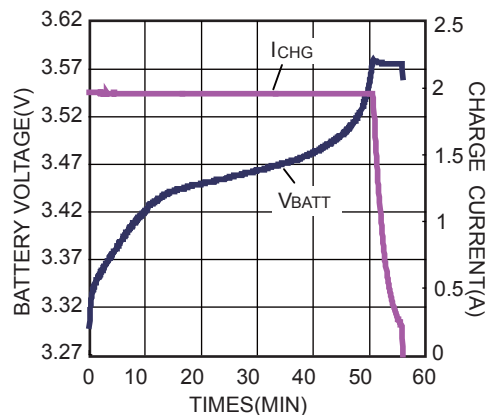

### EV2623-R-00A EVALUATION BOARD

## EVB TEST RESULTS

Performance waveforms are tested on the evaluation board.

$V_{IN}=5V$ ,  $C1=4.7\mu F$ ,  $C2=22\mu F$ ,  $L=4.7\mu H$ ,  $RS1=100m\Omega$ , Real/Simulation Battery Load,  $T_A=25^\circ C$ , unless otherwise noted.

**Steady State Waveform**

1 Cell,  $V_{BATT}=2V$

**Steady State Waveform**

1 Cell,  $V_{BATT}=3.2V$

**Steady State Waveform**

1 Cell,  $V_{BATT}=3.6V$

**Power On Waveform**

1 Cell,  $I_{CHG}=2A$ ,  $V_{BATT}=3V$

**Power Off Waveform**

1 Cell,  $I_{CHG}=2A$ ,  $V_{BATT}=3V$

**EN On Waveform**

1 Cell,  $I_{CHG}=2A$ ,  $V_{BATT}=3V$

**EN Off Waveform**

1 Cell,  $I_{CHG}=2A$ ,  $V_{BATT}=3V$

## PRINTED CIRCUIT BOARD LAYOUT

Figure 3—Bottom Layer

## QUICK START GUIDE

This board is used for the MP2623 application of standalone switching charger which can charge 1- or 2-cell LiFePO<sub>4</sub> batteries. The board layout accommodates most commonly used capacitors.

The default output voltage on this board is preset to 3.6V for 1-cell LiFePO<sub>4</sub> battery. Connect CELLS pin to VREF33 to regulate the output to 7.2V for 2-cell LiFePO<sub>4</sub> battery.

The two LEDs are operating status indicators. When the input is OK for charging the battery load, LED1 will be on. Otherwise it is off. When the charging operation is normal, the LED2 is on. And if any event including battery full, NTC fault, timer out, thermal protection and EN disabled occurs, LED2 will be off.

Particularly, LED2 will be twinkling if BATT is floated.

### 1. Charge current setting:

The charge current can be programmed by the sense resistor RS2, the formula is as:

$$I_{\text{CHG}}(\text{A}) = \frac{200\text{mV}}{\text{RS2}(\text{m}\Omega)}$$

2. Preset the power supply output to 5V, and then turn off. Attach the positive and negative ends of the power supply output to the VIN and GND pins, respectively.
3. Attach the positive and negative ends of the battery to the BATT and GND pins, respectively.
4. Turn the power supply on. The board will automatically startup if EN is pulled to GND.
5. To use the Enable function, apply a digital input to the EN pin. Drive EN higher than 1.8V to turn off the charger, drive EN less then 0.4V to turn it on.

Please see the datasheet of MP2623 for further detailed information.
