

DESCRIPTION

The MP3309A is a WLED step-up converter for 2.7V-to-5.5V input that uses peak-current mode to regulate the LED current sensed through an external low-side resistor. The 200mV feedback voltage and synchronous rectification reduces power loss and reduces PCB space requirements. To connect an external Schottky accomplishes the non-synchronous mode for heavy load to improve the thermal performance.

The MP3309A features a programmable switching frequency to optimize efficiency. It supports both analog and PWM dimming.

In addition, the MP3309A has LED open protection, cycle-by-cycle current limit protection and thermal shutdown protection. The I²C interface can set the over-voltage protection threshold, analog dimming and read IC status. MP3309A is available in QFN10 3*3mm package.

ELECTRICAL SPECIFICATIONS

Parameter	Symbol	Value	Units
Input Voltage	V _{IN}	2.7-5.5	V
Output Voltage	V _{LED}	<35	V
LED Current	I _{LED}	40	mA

FEATURES

- 2.7V-to-5.5V Input Voltage
- Low 200mV Feedback Voltage with ±1% Accuracy
- Selectable Synchronous or Non-synchronous Mode Thru I²C
- 400kHz I²C-Compatible Interface
- Analog and PWM Dimming
- Programmable Switching Frequency
- Programmable Over Voltage Protection Point
- Software- or Hardware-Enable Function
- UVLO, Thermal Shutdown
- Available in 3x3mm QFN 10 package

APPLICATIONS

- Feature Phones and Smart Phones
- Tablets
- Video Displays

All MPS parts are lead-free, halogen free, and adhere to the RoHS directive. For MPS green status, please visit MPS website under Quality Assurance.

EVB TEST RESULTS

Performance waveforms are tested on the evaluation board.

$V_{IN} = 3.6V$, 8 LEDs in series, $I_{LED} = 40mA$, $L = 10\mu H$, $T_A = 25^\circ C$, unless otherwise noted.

PRINTED CIRCUIT BOARD LAYOUT

Figure 1—Top Layer

Figure 2—Bottom Layer

QUICK START GUIDE

1. Provide a voltage source ranges from 2.7-5.5V between VIN terminal and GND.
2. Connect LED strings between LED+ and LED-.
3. Dimming Mode

Analog Dimming:

Firstly pull EN/PWML pin to logical high, then connect SCL/PWMH and SDA/PWMH pin together and add >20kHz PWM signal.

PWM Dimming:

Firstly connect SCL/PWMH and SDA/PWMH together and pull to logical high, then add 200-2kHz PWM signal to EN/PWML pin.

4. According output current select feedback resistor at FB pin(resister-current calculation equation as datasheet).
