

## DESCRIPTION

The MP3336A is a compact, dual-channel, high-power, flash LED driver that can drive up to 2A in flash mode for each LED. It is usually applied for camera phones to improve image and video quality in low-light environments. The MP3336A operates with a selectable 1/2/3/4MHz switching frequency and uses a synchronous, current-mode PWM boost converter to regulate the LED current with two high-current sources. The MP3336A provides a high efficiency and optimized solution for smaller PCB spaces.

The MP3336A features a standard I<sup>2</sup>C interface, dual LED channels, rich protection modes, and high power density and performances. The MP3336A can also support flash, assist, indicator, and 5V DC modes.

The cathodes of the dual-flash LED are referenced to GND, which is better for improving thermal performance in layout. The MP3336A is available in a WLCSP-20 (1.6mmx2.0mm) package.

## QUICK START GUIDE

1. Connect the positive and negative terminals of the power supply (2.7V ~5.5V) to the VIN and GND pins on the EV board, respectively.
2. Supply the EN terminal with logical signal.
3. Connect the positive and negative terminals of the LED to the LED1/2 pin and GND on the EV board, respectively.
4. Please connect SCL, SDA and GND of EV board to the SCL, SDA and GND of a programmable kit (EVKT-USBI2C-02) with I2C interface, respectively.
5. Power on sequence: VIN → EN → I2C setting → Set LED1/2\_EN bit (to light the LED load). When work in flash mode with hardware trigger mode, please give a level or pulse signal to STR pin.
