EV3432-L-00A

High-Efficiency, SYNC, BOOST Converter with Programmable Current Limit EV Board

DESCRIPTION

EV3432-L-00A Evaluation Board is designed to demonstrate the capability of MP3432. The MP3432 is a 600kHz fixed frequency, wide input range, highly integrated boost converter. It starts from an input voltage as low as 2.7V, and supports up to 30W load power from 1-cell battery.

MP3432 adopts constant-off-time (COT) control topology providing fast transient response. One MODE pin supports mode selection of PSM, FCCM and USM in light load condition. And the integrated low-side and high-side MOSFET simplify the design and save BOM cost.

The MP3432 features with programmable switching peak current limit provides accurate over load protection. And it also features with programmable input UVLO and over temperature protection.

The MP3432 is available in a 13-pin 3mmx4mm QFN package.

Electrical Specification

Parameter	Symbol	Value	Units
Input Voltage	V_{IN}	3-8.4	V
Switching Current Limit	I_{sw_LIMIT}	14	A
Output Voltage	V_{OUT}	9	V
Output Current	I_{OUT}	3.5	A

FEATURES

- 2.7V-to-13V Startup Voltage
- 0.8V-to-13V Operation Voltage
- Up to 16V Output Voltage
- Support 30W Average Power Load and 40W Peak Power Load from 3.3V
- Programmable Switching Peak Current Limit
- Integrated 6.5mΩ & 10mΩ Power MOSFET
- >95% Efficiency for 3.6V VIN to 9V/3A
- Selectable PSM, >23kHz USM, and FCCM Mode in Light Load Condition
- Auto Pass-Through Function in PSM Mode when VIN>VOUT
- 600kHz Fixed Switching Frequency
- Adaptive COT for Fast Transient Response
- External Soft Start and Compensation Pin
- Programmable UVLO and Hysteresis
- 150°C Over Temperature Protection
- Available in 3x4mm QFN-13 Package

APPLICATIONS

- Notebook
- Bluetooth Speaker
- Portable POS System
- Quick Charger Power Bank

QUICK START GUIDE

The output voltage of this board is set to 9V. The board layout accommodates most commonly used components. Following blew steps to quick start EV3432-L-00A.

1. Preset Power Supply to 3V ⩽ VIN ⩽ 8.4V.
2. Turn Power Supply off.
3. Connect Power Supply terminals to:
   a. Positive (+): VIN
   b. Negative (–): GND
4. Connect Load to:
   a. Positive (+): VOUT
   b. Negative (–): GND
5. Turn Power Supply on after making connections.
6. The MP3432 is enabled on the evaluation board once VIN is applied.
7. The output voltage VOUT can be changed by varying R2. Calculate the new value using the formula:

$$V_{OUT} = V_{FB} \times (1 + \frac{R1}{R2})$$

   Where V_{FB} = 1V and R1=750kΩ.
8. If USM and FCCM is needed, following below steps:
   a. Turn Power Supply off.
   b. Change J1 connection. Connect 1 to 2 for FCCM, connect 2 to 3 for PSM, and float 2 for USM.
   c. Turn the power on. IC will work with the mode which is set by step b.
9. If the auto pass-through function is needed, following below steps:
   a. Set J1 to make MP3432 working in PSM.
   b. Increasing input voltage much higher than $V_{OUT-SET}$, MP3432 will enter auto pass-through automatically.
