

## DESCRIPTION

The EV4700-S-00A is the Evaluation Board designed to demonstrate the capabilities of MP4700 for TV backlighting applications. The MP4700 is a high efficiency step-down converter controller designed for driving the high brightness LEDs.

With a 250-300V input  $V_{IN}$  and an 8-18V power supply for MP4700, the EV4700-S-00A can drive a LED string up to 200V, and the LED current is regulated to 250mA. The EVB realizes input UVLO by INUV pin, the PWM dimming can be implemented by applying a PWM dimming signal on PWM pin. The short LED load protection and Over-Voltage protection are included.

## ELECTRICAL SPECIFICATION

Parameter	Symbol	Value	Units
Input Voltage	$V_{IN}$	250-300	V
IC Power Supply	$V_{supply}$	8-18	V
LED Voltage	$V_{LED}$	200	V
LED Current	$I_{LED}$	250	mA
Over Voltage Protection	$V_{LED-Max}$	250	V

## FEATURES

- 8V-to-18V IC Supply Voltage
- Constant-Current LED Driver
- Power MOSFET Zero-Current Turn-On
- No Freewheeling Diode Reverse Recovery Issues
- High Efficiency and Reliability in Boundary Conduction Mode
- Low 1mA Operation Current
- PWM Dimming Control
- Hiccup Short Circuit Protection
- UVLO for Bus Input Voltage
- Input UVLO, Thermal Shutdown
- Maximum Frequency Limited to 160kHz
- Available in SOIC8 Package

## APPLICATIONS

- LED Backlighting for TV and Monitor
- DC/DC or AC/DC LED Driver applications
- General Illumination

All MPS parts are lead-free and adhere to the RoHS directive. For MPS green status, please visit MPS website under Quality Assurance. "MPS" and "The Future of Analog IC Technology", are Registered Trademarks of Monolithic Power Systems, Inc.

**Warning:** Although this board is designed to satisfy safety requirements, the engineering prototype has not been agency approved. Therefore, all testing should be performed using an isolation transformer to provide the AC input to the prototype board.

## EV4700-S-00A EVALUATION BOARD

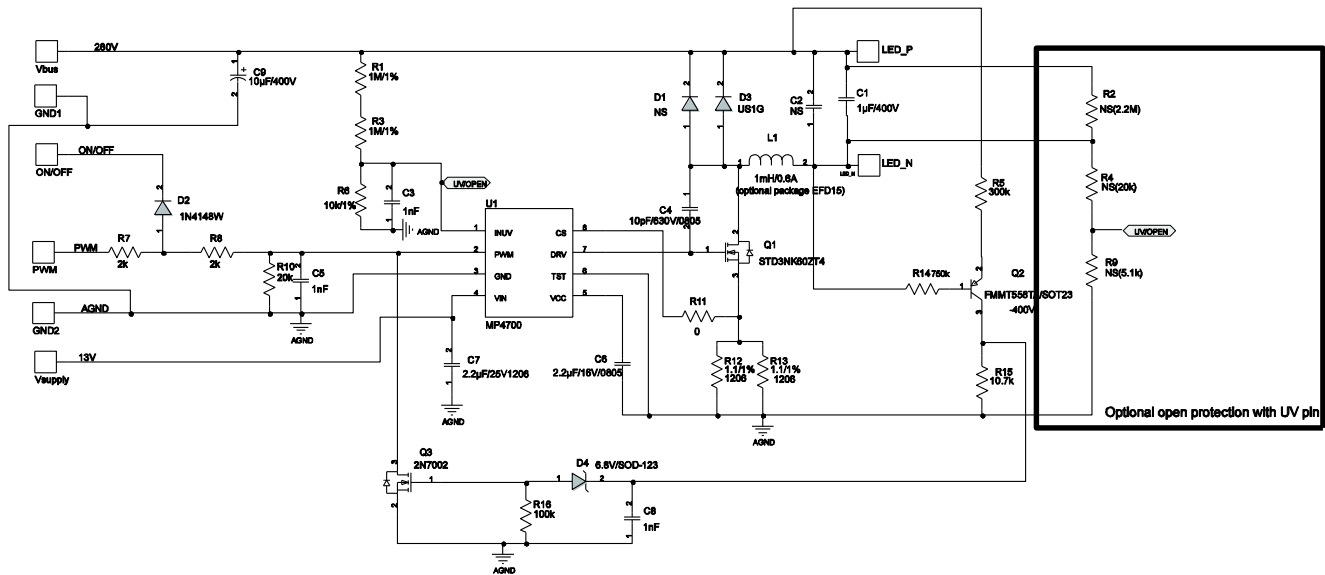

(L x W x H) 6.35cm x 6.35cm x 14mm

Board Number	MPS IC Number
EV4700-S-00A	MP4700

Efficiency vs.  $V_{IN}$

## EVB TEST RESULTS

Performance waveforms are tested on the evaluation board.

$V_{IN} = 280V$ ,  $V_{SUPPLY} = 13V$ ,  $V_{LED} = 200V$ ,  $I_{LED} = 250mA$ ,  $T_A = 20^\circ C$ , unless otherwise noted.

### EVB TEST RESULTS *(continued)*

Performance waveforms are tested on the evaluation board.

$V_{IN} = 280V$ ,  $V_{SUPPLY} = 13V$ ,  $V_{LED} = 200V$ ,  $I_{LED} = 250mA$ ,  $T_A = 20^{\circ}C$ , unless otherwise noted.

## QUICK START GUIDE

1. Preset the VIN power supply to 250V-300V, turn off VIN power supply, and connect VIN power supply to “VIN” connector.
2. Preset the IC power supply to 8-18V, turn off the power supply, and connect the IC power supply to “Vsupply” connector.
3. Preset the PWM dimming signal to 5V; turn off the signal, and connect the signal to “PWM” connector.
4. Preset the ON/OFF signal to 2-5V; turn off the signal, and connect the signal to “ON/OFF” connector.
5. Preset the LED string to 200V; connect the anode of LED string to “LED+” and the cathode of LED string to “LED-”.
6. Turn on the VIN power supply.
7. Turn on the IC power supply.
8. Turn on the PWM dimming signal.
9. Turn on the ON/OFF signal, the LED string should be ignited.
10. To demo the PWM dimming performance; set the square wave with amplitude 2-5V, and low level 0V as PWM dimming signal. The duty of LED current will follow the duty of PWM dimming signal.
