

DESCRIPTION

EV5507E-RG-00A Evaluation Board is designed to demonstrate the capabilities of MP5507E. The MP5507E is one front end power storage and management IC for SSD application.

MP5507E supports input hot swap, input startup inrush current control, input current limit and backup power management for SSD data backup in case of input power failure. MP5507E's built-in boost mode converter charges energy storage bulk capacitor to a programmed voltage when system is powered up and in case of input power failure, MP5507E transfers the energy from energy storage bulk capacitor to SSD system's DCDC switches via built-in buck mode converter to keep SSD system powered for data backup.

MP5507E is available in QFN16 (2.5mmX3.2mm) package.

ELECTRICAL SPECIFICATION

Parameter	Symbol	Value	Units
Input Voltage	V_{IN}	3.3	V
Charge Voltage	V_{STRG}	12	V
Bus Backup Voltage	V_{RLS}	2.9	V
Bus Backup Max Load	$I_{RELEASE}$	3	A

FEATURES

- Wide 2.7 to 7V Operating Input Range
- Internal 60mΩ Hot-swap
- Internal 100mΩ and 80mΩ Power Switches for Energy Storage and Release Management Circuits
- Up to 4.6A Input Current Limit
- Up to 3A Buck Release Current Capability
- 6V Bus Clamping Voltage
- Adjustable dv/dt Slew Rate for VB Start up
- Bus Power Good indicator
- Thermal protection
- Available in an QFN16(2.5mmx3.2mm) Package

APPLICATIONS

- Hard Disk Drives
- Solid State Drives
- Power Back-Up System

All MPS parts are lead-free, halogen free, and adhere to the RoHS directive. For MPS green status, please visit MPS website under Quality Assurance.

"MPS" and "The Future of Analog IC Technology" are Registered Trademarks of Monolithic Power Systems, Inc.

EVB TEST RESULTS

Performance waveforms are tested on the evaluation board.

$V_{IN} = 3.3V$, $V_{STORAGE} = 12V$, $V_{RELEASE} = 2.9V$, $T_A = +25^{\circ}C$, unless otherwise noted.

PRINTED CIRCUIT BOARD LAYOUT

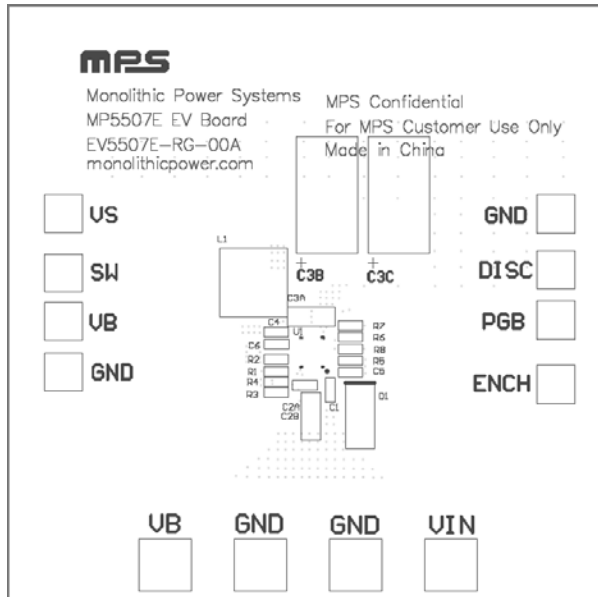

Figure 1—Top Silk Layer

Figure 2—Top Layer

Figure 3—Bottom Layer

QUICK START GUIDE

The board layout accommodates most commonly used components.

1. Connect the positive and negative terminals of the load to VB and GND pins, respectively.
2. Preset Power Supply to 3.3V. Turn off Power Supply.
3. Connect Power Supply terminals to:
Positive (+): VIN
Negative (-): GND
4. Turn on Power Supply after making connections, MP5507E will charge the storage capacitor to 12V after DCDC converter completes start-up.
5. In order to observe the power release performance, following two methods can be applied:
Turning off the power supply.
Short VIN to GND directly. Note: make sure bench power supply have output current limiting when do so.
6. Use R1 and R2 to set release voltage:

$$V_{\text{RELEASE}} = 0.79V \times \frac{R1+R2}{R2}$$

Similarly, R3 and R4 can be chosen for storage voltage setting:

$$V_{\text{STORAGE}} = 0.79V \times \frac{R3+R4}{R4}$$
