

EV6518-F-00A

1.5A, 35V Bipolar Stepper Motor Driver Evaluation Board

DESCRIPTION

The EV6518-F-00A is an evaluation board for the MP6518GF, a stepper motor driver with a built-in micro-stepping translator.

It operates from a supply voltage range of 8V to 35V and can deliver motor current up to 1.5A. It can drive a bipolar stepper motor in full- half-, quarter-, and eighth- step modes by setting the MS3, MS2, MS1. The input control signals and reference voltage for the MP6518GF are applied through the connector or generated on board.

ELECTRICAL SPECIFICATION

Parameter	Symbol	Value	Units
Input Voltage	V _{IN}	8 - 35	V
Maximum Output Current	I _{OUT}	1.5	A
Decay Mode	Automatic Decay		

FEATURES

- Wide 8V to 35V Input Voltage Range
- Up to 1.5A Programmable Output Current
- Full-, Half-, Quarter-, and Eighth- Step modes
- Adjustable Mixed Decay Ratio or Automatic Decay
- OCP, OVP, and OTP
- Fault Indication Output

APPLICATIONS

- Printers
- General Bipolar Stepper Drivers

All MPS parts are lead-free, halogen-free, and adhere to the RoHS directive. For MPS green status, please visit the MPS website under Quality Assurance. "MPS" and "The Future of Analog IC Technology" are registered trademarks of Monolithic Power Systems, Inc.

QUICK START GUIDE

1. Attach the input voltage ($8V \leq V_{IN} \leq 35V$) and input ground to the VIN and GND connectors respectively.
2. Switch the SW2 and SW3 to the position 3(Top side) to enable external reference voltage input from the EXT_REF connector and step signal input from the STEP connector respectively.
3. Attach the reference voltage ($0V \leq V_{REF} \leq 0.75V$) to the EXT_REF connector to set output current.
4. Attach the step signal to the EXT_STEP connector.
5. Input control and logic signal can be set either through the CN1 connector by the external MCU or through the SW1 by manual action. Manual action requires an external 5V Vcc voltage as a pull-up power supply.
