

DESCRIPTION

The MP8620 is a fully integrated step-down switch mode converter with built-in internal power MOSFETs. It achieves 25A continuous output current over a wide input supply range with excellent load and line regulation. Average current mode control scheme is employed in MP8620. It provides a reliable operation at low duty cycle in a noisy environment.

This EV board can be turned on or shut down via a remote ON/OFF input that is referenced to ground. This input is compatible with popular logic devices.

ELECTRICAL SPECIFICATIONS

Parameter	Symbol	Value	Units
Input Voltage	V_{IN}	8 – 15	V
Output Voltage	V_{OUT}	1.2	V
Output Current	I_{OUT}	25	A
Switch Frequency	f_{SW}	300	kHz

FEATURES

- Wide 8V to 15V Operating Input Range
- 25A Output Current
- 3mΩ/12mΩ Internal Power MOSFET Switches Deliver up to 95% Efficiency
- Synch from 300kHz to 1.5MHz External Clock
- Synch Output to Drive Another Regulator in 90°, 120°, 180° Phase-Shift Operation
- Feedback Voltage Accuracy: 1.0%
- Programmable Soft-Start
- Startup Tracking
- EN and Power Good for Power Sequencing
- Cycle-by-Cycle Over Current Protection
- Thermal Shutdown
- Output Adjustable from 0.8V to 3.3V
- Stable with Low ESR Output Ceramic Capacitors
- Available in a 6mmx6mm QFN Package

APPLICATIONS

- Distributed Power Systems
- Pre-Regulator for Linear Regulators
- Compact DC-DC Regulator for PCB Space Limited Platforms

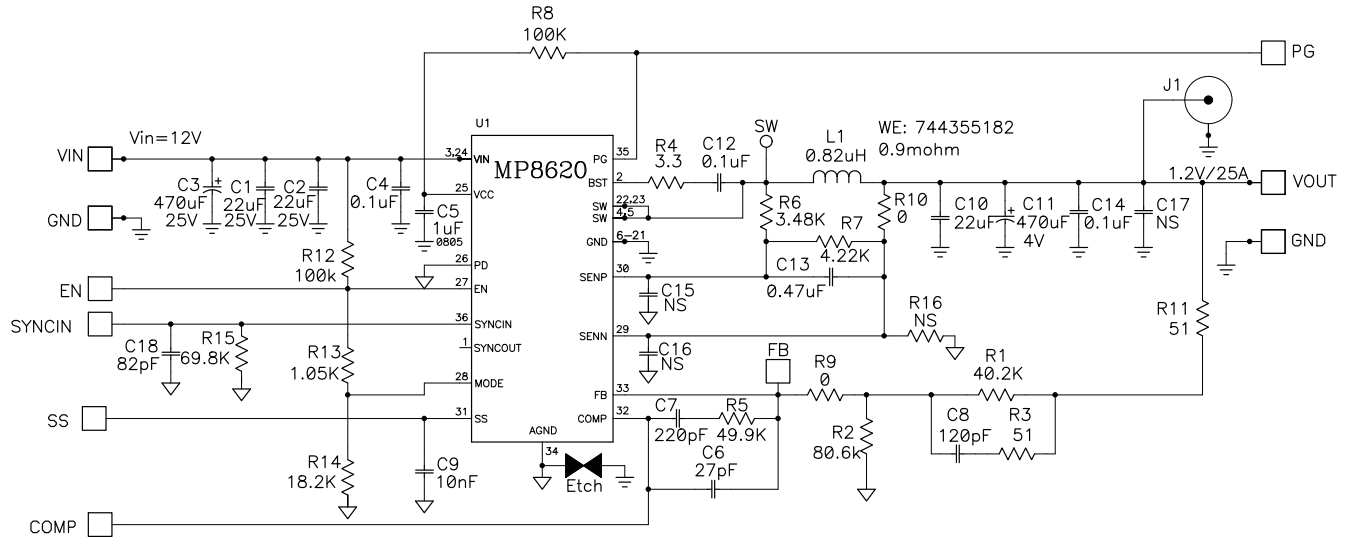

"MPS" and "The Future of Analog IC Technology" are Registered Trademarks of Monolithic Power Systems, Inc.

QUICK START GUIDE

1. Connect the positive and negative terminals of the load to the VOUT and GND pins, respectively.
2. Preset the power supply output between 8V and 16V, and then turn off the power supply.
3. Connect the positive and negative terminals of the power supply output to the VIN and GND pins, respectively.
4. Turn the power supply on. The MP8620 will automatically startup.
5. To use the Enable function, apply a digital input to the EN pin. Drive EN higher than 2V to turn on the regulator or less than 0.4V to turn it off.
6. Use R1 and R2 to set the output voltage with $V_{FB} = 0.8V$. Follow the Application Information section in the device datasheet to select the proper value of R1, R2, inductor and output capacitor values when output voltage is changed.
