

DESCRIPTION

The EV8652DL-00A is an evaluation board for the MP8652, a 400KHz step-down regulator.

An integrated 18mΩ power MOSFETS provides 15A continuous load current over a wide operating input voltage of 4.5V to 14V.

Current mode control provides fast transient response and eases loop stabilization.

This device is available in a 20-pin 3mm x 4mm QFN package.

ELECTRICAL SPECIFICATIONS

Parameter	Symbol	Value	Units
Input Voltage	V _{IN}	4.5 – 14	V
Output Voltage	V _{OUT}	1.2	V
Output Current	I _{OUT}	15	A

FEATURES

- 15A Output Current
- Wide 4.5V to 14V Operating Input Range
- Synchronizable to > 1MHz External Clock
- Adjustable Output from 0.8V to 12V
- Fully Assembled and Tested

APPLICATIONS

- Blade Servers
- Digital Set-top Box
- Personal Video Recorders
- Broadband Communications
- Flat Panel Television and Monitors
- Distributed Power Systems

"MPS" and "The Future of Analog IC Technology" are Registered Trademarks of Monolithic Power Systems, Inc.

EV8652DL-00A EVALUATION BOARD

QUICK START GUIDE

1. Connect the positive and negative terminals of the load to the VOUT and GND pins, respectively.
2. Preset the power supply output to between 4.5V and 14V, then turn off the power supply.
3. Connect the positive and negative terminals of the power supply output to the VIN and GND pins, respectively.
4. Turn the power supply on. The board will automatically startup.
5. To use the Enable function, apply a digital input to the EN pin. Drive EN higher than 1.2V to turn on the regulator or less than 0.4V to turn it off.
6. Apply up to 1MHz frequency logic level clock signal to the EN pin to synchronize the device to an external clock. The duty cycle is not critical.
