

### DESCRIPTION

The EV8676DN-00A evaluation board is a fully assembled and tested PCB that demonstrates the performance of MP8676, a monolithic step-down switch mode regulator.

The EVB achieves 4.5A continuous output current over a wide input supply range from 4.5V to 42V. The MP8676 switches at 420kHz and is synchronizable up to >1.5MHz external clock.

Current mode operation provides fast transient response and eases loop stabilization.

Fault condition protection includes cycle-by-cycle current limiting and thermal shutdown.

This device, available in an 8-pin SOIC package with exposed pad, provides a very compact system solution with minimal reliance on external components.

### ELECTRICAL SPECIFICATIONS

Parameter	Symbol	Value	Units
Input Voltage	$V_{IN}$	4.5 – 42	V
Output Voltage	$V_{OUT}$	3.3	V
Output Current	$I_{OUT}$	4.5	A

### FEATURES

- Wide 4.5V to 42V Operating Input Range
- 4.5A Continuous Output Current
- Fixed 420kHz Frequency
- Synchronizable up to 1.5MHz
- 3.3V Rating Output Voltage
- Stable with Low ESR Output Ceramic Capacitors
- Fully Assembled and Tested

### APPLICATIONS

- Digital Set Top Boxes
- Personal Video Recorders
- Broadband Communications
- Flat Panel Television and Monitors

"MPS" and "The Future of Analog IC Technology" are Registered Trademarks of Monolithic Power Systems, Inc.

## EV8676DN-00A EVALUATION BOARD

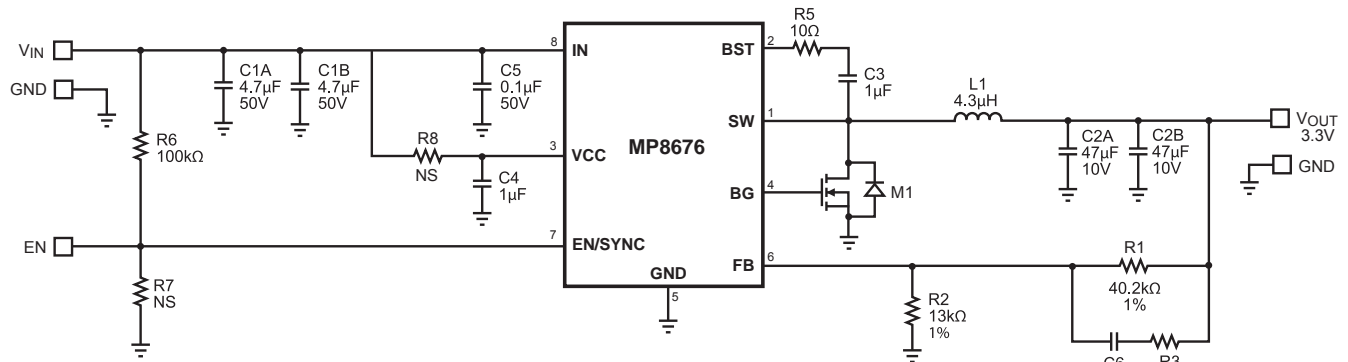

(L x W x H) 2.2" x 2.0" x 0.5"  
(5.6cm x 5.0cm x 1.2cm)

Board Number	MPS IC Number

## QUICK START GUIDE

1. Connect the positive and negative terminals of the load to VOUT and GND pins, respectively.
2. Preset the power supply output to 4.5V – 42V and turn off the power supply.
3. Connect the positive and negative terminals of the power supply output to the VIN and GND pins, respectively.
4. Turn the power supply on. The board will automatically startup.
5. To use the Enable function, apply a digital input to EN pin. Drive EN higher than 2V to turn on the regulator, drive EN less than 0.4V to turn it off.
6. Apply up to 1.5MHz frequency logic level clock signal to the EN pin to synchronize the device to an external clock. The duty cycle is not critical.
