

DESCRIPTION

The EV8718EN-00A is an evaluation board for the MP8718, a high frequency step-down regulator with an integrated power MOSFET. The MP8718 is a high frequency synchronous rectified step-down switch mode converter with built in internal power MOSFETs. It offers a very compact solution to achieve 4A continuous output current over a wide input supply range with excellent load and line regulation. The MP8718 has synchronous mode operation for higher efficiency over output current load range. Current mode operation provides fast transient response and eases loop stabilization. Full protection features include OCP and thermal shut down. The MP8718 requires a minimum number of readily available standard external components and is available in a space saving 8-pin SOIC package with an exposed pad.

ELECTRICAL SPECIFICATIONS

Parameter	Symbol	Value	Units
Input Voltage	V_{IN}	8 – 21	V
Output Voltage	V_{OUT}	1.2	V
Output Current	I_{OUT}	0 – 4	A

FEATURES

- Wide 8V to 21V Operating Input Range
- 4A Output Current
- Fixed 500kHz Switching Frequency
- Sync from 300kHz to 2MHz External Clock
- OCP Protection and Thermal Shutdown

APPLICATIONS

- Notebook Systems and I/O Power
- Networking Systems
- Digital Set Top Boxes
- Personal Video Recorders
- Flat Panel Television and Monitors
- Distributed Power Systems

"MPS" and "The Future of Analog IC Technology" are Registered Trademarks of Monolithic Power Systems, Inc.

EV8718EN-00A EVALUATION BOARD

Board Number	MPS IC Number

QUICK START GUIDE

1. Connect the positive and negative terminals of the load to the VOUT and GND pins, respectively.
2. Preset the power supply output between 8V and 21V, then turn off the power supply.
3. Connect the positive and negative terminals of the power supply output to the VIN and GND pins, respectively.
4. Turn the power supply on. The board will automatically startup.
5. To use the Enable function, apply a digital input to the EN pin. Drive EN higher than 2V to turn on the regulator or less than 0.4V to turn it off.
6. Apply up to 2MHz frequency logic level clock signal to the EN pin to synchronize the device to an external clock. The duty cycle is not critical.
