EV8736DL-00A

High Efficiency, Fast Transient, 6A, 19V
Synchronous Step-down Converter
Evaluation Board

DESCRIPTION

The EV8736DL-00A is an evaluation board for the MP8736DL, a monolithic synchronous buck regulator.

This EV board can deliver 6A continuous load current over an operating input voltage 4.5V to 19V. High efficiency can be achieved over a wide output current load range.

Constant-On-Time (COT) control mode provides fast transient response and eases loop stabilization.

This EV board can be turned on or shut down via a remote ON/OFF input that is referenced to ground. This input is compatible with popular logic devices.

ELECTRICAL SPECIFICATIONS

Parameter	Symbol	Value	Units
Input Voltage	V_{IN}	4.5 – 19	V
Output Voltage	V_{OUT}	1.05	V
Output Current	I_{OUT}	6	A

FEATURES

- Wide 4.5V to 19V Operating Input Range
- 6A Output Current
- Internal 30mΩ High-Side 12mΩ Low-Side Power MOSFETs
- Proprietary Switching Loss Reduction Technique
- 1% Reference Voltage
- Programmable Soft Start Time
- Soft Shutdown
- Programmable Switching Frequency
- SCP, OCP, OVP, UVP Protection and Thermal Shutdown
- Output Adjustable from 0.8V to 13V
- Available in a 20-pin QFN3x4 Package

APPLICATIONS

- Notebook Systems and I/O Power
- Networking Systems
- Digital Set Top Boxes
- Personal Video Recorders
- Flat Panel Television and Monitors
- Distributed Power Systems

"MPS" and "The Future of Analog IC Technology" are Registered Trademarks of Monolithic Power Systems, Inc.

QUICK START GUIDE

1. Connect the positive and negative terminals of the load to the VOUT and GND pins, respectively.
2. Preset the power supply output between 4.5V and 19V, and then turn off the power supply.
3. Connect the positive and negative terminals of the power supply output to the VIN and GND pins, respectively.
4. Turn the power supply on. The MP8736 will automatically startup.
5. To use the Enable function, apply a digital input to the EN pin. Drive EN higher than 2V to turn on the regulator or less than 0.4V to turn it off.
6. Use R1 and R2 to set the output voltage with $V_{FB} = 0.8V$. Follow the Application Information section in the device datasheet to select the proper value of R1, R2, inductor and output capacitor values when output voltage is changed.
7. If lower ripple at light loads is needed, then use TOKO 1.2uH or 1.5uH L1. But with the larger L1, the transient response peak to peak value will become larger too.
