

DESCRIPTION

The EVKT7770-2.1CH-00A is an evaluation board for the MP7770, a 2.1 channel amplifiers demo board.

There are 3 channels (2pcs MP7770) for the subwoofer speaker, the left front and right front speakers. The subwoofer channel is with BTL output configuration, and other two channels are with SE output configuration.

For more MP7770 operation information, please refer to the MP7770 datasheet.

ELECTRICAL SPECIFICATIONS

Parameter	Value
Input Voltage VCC	19 – 30V
Number of channels	2 x SE, BTL
Max. output current	5.5A

FEATURES

- Wide 19V to 30V Input Voltage Range
- Output Power at 10%THD:
 - 67W at 19.5V (Stereo SE: 2 x 16W into 3Ω Load, mono BTL: 35W into 6Ω Load)
 - 101W at 24V (Stereo SE: 2 x 24.5W into 3Ω Load, mono BTL: 52W into 6Ω Load)
 - 160W at 30V (Stereo SE: 2 x 39W into 3Ω Load, mono BTL: 82W into 6Ω Load)
- Low noise, >100dB DNR
- Integrated Pop Elimination Circuit
- Thermal and Short-Circuit Protection

APPLICATIONS

- DVD Receiver
- Mini Combo System
- Home Theater Systems
- Audio Docking or High-Power Sound Box

All MPS parts are lead-free, halogen free, and adhere to the RoHS directive. For MPS green status, please visit MPS website under Quality Assurance. "MPS" and "The Future of Analog IC Technology" are Registered Trademarks of Monolithic Power Systems, Inc.

QUICK START GUIDE

1. This board is 2.1 channel amplifiers demo board, subwoofer channel with BTL output configuration and Left Front / Right Front channels with SE output configuration. Please see connection guideline as below figure.

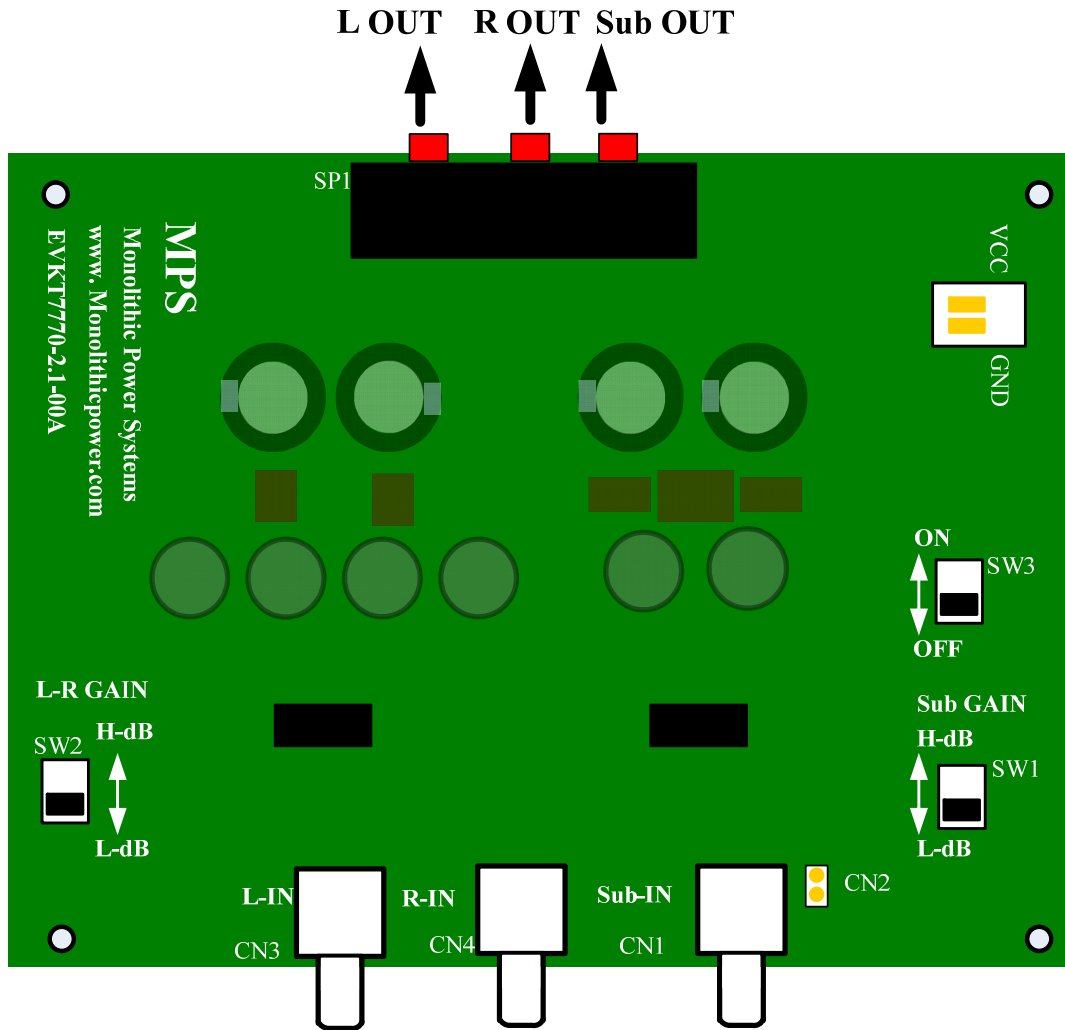

Figure 5—Connection for Normal Application (Top View)

2. Power Requirements

- Power supply: 19V to 30V, 10A. (If the VDD changed, please see MP7770 datasheet for detail UVP configuration for best pop performance.)
- 0V to 1.5VRMS (max) audio signal source.
- Speaker: typical 6~8ohm for subwoofer channel; typical 3~8ohm for other 2 SE channels

3. Setup Condition and turn on sequence

- Set the input configuration for subwoofer channel: if the input signal is single-ended, install the CN2; if the input signal is differential, keep CN2 not connected. The input signals of other two

channels are all single-ended configuration. Connect the audio input signal sources to the corresponding inputs. Default setup: CN2 is shorted.

Table2: Jumper CN2 Operating Description

Jumper	Description
CN2	Connected: select the SE input configuration for subwoofer channel, positive input of sub channel is connected to GND. not connected: select the differential input for Subwoofer channel

- Volume Control (SW1 and SW2 can adjust the amplifier's GAIN)

Table3: SW1, SW2 adjust the GAIN Description

	Channel	GAIN(V/V)
SW1(BTL)	subwoofer	L-dB: 15 H-dB: 30
SW2(SE)	Left front	L-dB: 15 H-dB: 30
	Right front	

- Connect the outputs to the corresponding external speakers.
- Set the ENABLE switch to disable (SW3)
- Connect the power supply to the VDD terminals, or turn on the power supply to apply power to the board.
- Set the ENABLE switch to enable the amplifiers.

4. Turn-Off Sequence

- Switch the ENABLE at disable position.
- Turn off power supply.
