

DESCRIPTION

The EVKT7770-5.1CH-00A is an evaluation board for the MP7770, a 5.1 channel amplifiers demo board.

There are 6 channels (4pcs MP7770) for the subwoofer speaker, the center speaker, the left Surround and right Surround speakers, the left front and right front speakers. The subwoofer channel and center channel are with BTL output configuration, and other four channels are with SE output configuration.

For more MP7770 operation information, please refer to the MP7770 datasheet.

ELECTRICAL SPECIFICATIONS

Parameter	Value
Input Voltage VCC	19 – 30V
Number of channels	4 x SE, 2 x BTL
Max. output current	5.5A

FEATURES

- Wide 19V to 30V Input Voltage Range
- Output Power at 10%THD:
 - 134W at 19.5V (Four SE: 2 x 16W into 3Ω Load, Stereo BTL: 2 x 35W into 6Ω Load)
 - 202W at 24V (Four SE: 2 x 24.5W into 3Ω Load, Stereo BTL: 2 x 52W into 6Ω Load)
 - 310W at 30V (Four SE: 2 x 39W into 3Ω Load, Stereo BTL: 2 x 82W into 6Ω Load)
- Low noise, >100dB DNR
- Integrated Pop Elimination Circuit
- Thermal and Short-Circuit Protection

APPLICATIONS

- DVD Receiver
- Mini Combo System
- Home Theater Systems
- Audio Docking or High-Power Sound Box

All MPS parts are lead-free, halogen free, and adhere to the RoHS directive. For MPS green status, please visit MPS website under Quality Assurance. "MPS" and "The Future of Analog IC Technology" are Registered Trademarks of Monolithic Power Systems, Inc.

QUICK START GUIDE

1. This board is 5.1 channel amplifiers demo board, subwoofer channel and center channel with BTL output configuration, and Left Front / Right Front/ left Surround/ right Surround channels with SE output configuration. Please see connection guideline as below figure.

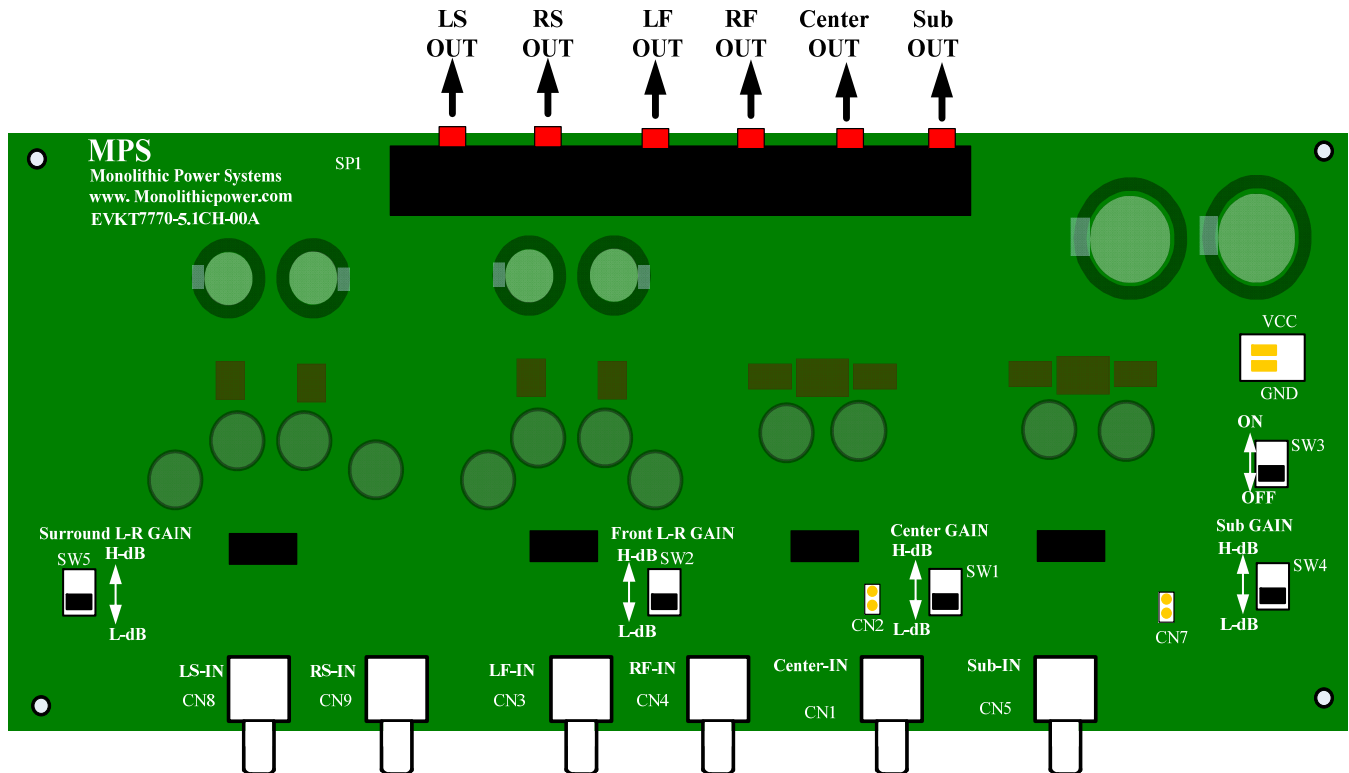

Figure 5—Connection for Normal Application (Top View)

2. Power Requirements

- Power supply: 19V to 30V, 20A. (If the VDD changed, please see MP7770 datasheet for detail UVP configuration for best pop performance.)
- 0V to 1.8VRMS (max) audio signal source.
- Speaker: typical 6~8ohm for subwoofer channel; typical 3~8ohm for other 2 SE channels

3. Setup Condition and turn on sequence

- Set the input configuration for subwoofer/center channel: if the input signal is single-ended, install the CN2/CN7; if the input signal is differential, keep CN2/CN7 not connected. The input signals of other two channels are all single-ended configuration. Connect the audio input signal sources to the corresponding inputs. Default setup: CN2/CN7 is shorted.

Table1: Jumper CN2 and CN7 Operating Description

Jumper	Description
CN2,CN7	<p>Connected: select the SE input configuration for subwoofer channel and center channel, positive input of sub channel and center channel are connected to GND.</p> <p>not connected: select the differential input for Subwoofer channel and center channel.</p>

- Volume Control (SW1,SW2,SW4 and SW5 can adjust the amplifier's GAIN)

Table2: SW1, SW2, SW4 and SW5 adjust the GAIN Description

	Channel	GAIN(V/V)
SW1(BTL)	subwoofer	L-dB: 15 H-dB: 30
SW4(BTL)	Center	L-dB: 15 H-dB: 30
SW2(SE)	Left front	L-dB: 15
	Right front	H-dB: 30
SW5(SE)	left Surround	L-dB: 15
	right Surround	H-dB: 30

- Connect the outputs to the corresponding external speakers.
- Set the ENABLE switch to disable (SW3)
- Connect the power supply to the VDD terminals, or turn on the power supply to apply power to the board.
- Set the ENABLE switch to enable the amplifiers.

4. Turn-Off Sequence

- Switch the ENABLE at disable position.
- Turn off power supply.
