

### DESCRIPTION

The EVM3620-Q-00B is an evaluation board for MPM3620, a synchronous rectified, step-down Mini-Module regulator with built-in power MOSFETs, inductor and two capacitors.

The Evaluation Board can deliver a 2A continuous output current with excellent load and line regulation over a wide input supply range. External AAM pin provides selectable power save mode or force PWM mode.

Full protection features include over-current protection and thermal shut down.

The MPM3620 is available in a space-saving QFN20 (3mm x5mmx1.6mm) package.

## QUICK START GUIDE

1. Connect the positive and negative terminals of the load to the VOUT and GND pins, respectively.
2. Preset the power supply output between 4.5V and 24V, and then turn off the power supply.
3. Connect the positive and negative terminals of the power supply output to the VIN and GND pins, respectively.
4. Turn the power supply on. The board will automatically start up.
5. To use the Enable function, apply a digital input to the EN pin. Drive EN higher than 1.4V to turn on the regulator, or less than 1.25V to turn it off.
6. Float AAM pin or drive AAM to a high level voltage to set MPM3620 work at force PWM mode.
