

DESCRIPTION

The MP155 is a primary-side regulator that provides accurate constant voltage regulation without the opto-coupler, and supports buck, buck-boost, and flyback topologies. An integrated 500V MOSFET simplifies the structure and reduces costs. These features make it a competitive candidate for off-line low-power applications, such as home appliances and standby power.

The MP155 is a green-mode-operation regulator. Both the peak current and the switching frequency decrease as the load decreases. As a result, it offers excellent efficiency performance at light load, thus improving the overall average efficiency.

The MP155 features various protections such as thermal shutdown (TSD), VCC under-voltage lockout (UVLO), overload protection (OLP), short-circuit protection (SCP), and open loop protection.

The MP155 is available in the TSOT23-5 package.

FEATURES

- Primary-side constant voltage (CV) control, supporting buck, buck-boost and flyback topologies
- Integrated 500V/20Ω MOSFET
- < 100mW No-load power consumption
- Up to 3W output power
- Maximum DCM output current of 130mA
- Maximum CCM output current of 220mA
- Low VCC operating current
- Frequency foldback
- Maximum frequency limit
- Peak current compression
- Internal high-voltage current source
- Internal 350ns leading-edge blanking
- Thermal shutdown (auto restart)
- VCC under-voltage lockout with hysteresis (UVLO)
- Timer-based overload protection.
- Short circuit protection
- Open loop protection

APPLICATIONS

- Home Appliance, white goods and consumer electronics
- Industrial Controls
- Standby Power

All MPS parts are lead-free and adhere to the RoHS directive. For MPS green status, please visit MPS website under Quality Assurance.

EVB TEST RESULTS

Performance waveforms are tested on the evaluation board.

$V_{IN} = 85\text{-}265\text{Vac}$, $V_{OUT} = 12\text{V}$, $I_{OUT} = 200\text{mA}$, $T_A = 25^\circ\text{C}$, unless otherwise noted.

Normal Operation

$V_{IN} = 115\text{Vac}$, Full Load

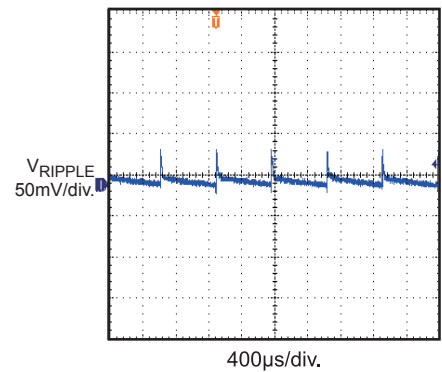

Normal Operation

$V_{IN} = 230\text{Vac}$, Full Load

Output Ripple

$V_{IN} = 115\text{Vac}$, No Load

Output Ripple

$V_{IN} = 115\text{Vac}$, Full Load

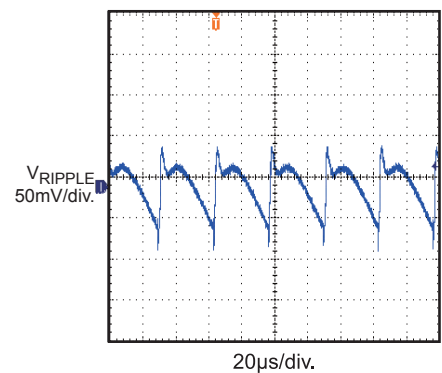

Output Ripple

$V_{IN} = 230\text{Vac}$, No Load

Output Ripple

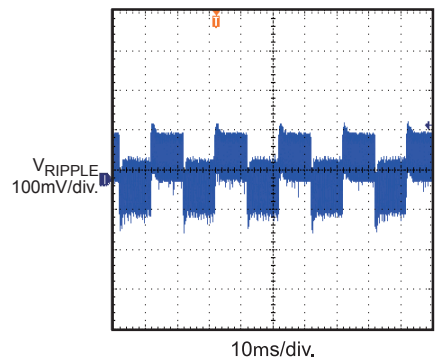

$V_{IN} = 230\text{Vac}$, Full Load

EVB TEST RESULTS (continued)

Performance waveforms are tested on the evaluation board.

 $V_{IN} = 85\text{-}265\text{Vac}$, $V_{OUT} = 12\text{V}$, $I_{OUT} = 200\text{mA}$, $T_A = 25^\circ\text{C}$, unless otherwise noted.

Soft Start
 $V_{IN} = 85\text{Vac}$

Soft Start
 $V_{IN} = 265\text{Vac}$

Turn-on Delay
 $V_{IN} = 115\text{Vac}$, No Load

Turn-on Delay
 $V_{IN} = 115\text{Vac}$, Full Load

Turn-on Delay

Open Loop

No Load

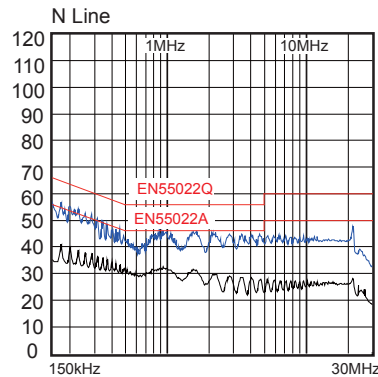

Conducted EMI

Two-wire input, $V_{IN} = 230\text{VAC}$

Conducted EMI

Two-wire input, $V_{IN} = 230\text{VAC}$

SURGE PERFORMANCE

With the input capacitors C3 (10 μ F) and C4 (10 μ F), the board can pass 1kV surge test. Table 1 shows the capacitance required under normal condition for different surge voltage.

Table 1: Recommended Capacitor Values

Surge Voltage	500V	1000V	2000V
C3	1 μ F	10 μ F	22 μ F
C4	1 μ F	4.7 μ F	10 μ F

QUICK START GUIDE

1. Preset Power Supply to $85V \leq V_{IN} \leq 265V$.
2. Turn Power Supply off.
3. Connect the Line and Neutral terminals of the power supply output to L and N port.
4. Connect the positive terminal of the load to V_{OUT} port, and connect the negative terminal of the load to GND port.
5. Turn Power Supply on after making connections.
