

### DESCRIPTION

The EV2005DD-00A evaluation board demonstrates the performance of MP2005, a monolithic low-current, low-dropout LDO linear regulator. It operates from a 2.5V to 5V input bias voltage and regulates the output voltage from as low as 0.5V.

The EVB can supply up to 800mA of load current with a typical dropout voltage of 75mV. It requires a bias supply (2.5V to 5.5V) separate from  $V_{IN}$  to run the internal reference and LDO drive circuitry. The output current comes directly from the input voltage supply for high efficiency regulation. The 0.5V internal reference voltage allows the output to be programmed to a range of 0.5V to 5V.

The EV2005DD-00A provides thermal overload and current limit protection, stability with ultra low ESR ceramic capacitors as low as 1uF, and fast transient response. The MP2005 is available in a 8-pin QFN (2mm x 3mm) package and is also available in fixed output voltage versions.

### ELECTRICAL SPECIFICATIONS

Parameter	Symbol	Value	Units
Input Voltage	$V_{IN}$	1.0 – 5	V
Dropout Voltage	$V_{DROPOUT}$	75	mV
Output Current	$I_{OUT}$	0.5	A

### FEATURES

- Wide 1.0V to 5V Input Voltage Range
- Stable with Very Small Ceramic Capacitors
- 75mV Dropout at 800mA Output
- 2% Accurate Output Voltage
- Adjustable Output Range from 0.5V to 5V
- Low Noise:  $80\mu V_{RMS}$  (10Hz to 100KHz)
- High PSRR: 40dB at 1MHz
- Stable With Low-ESR Output Capacitors
- Low 100uA Ground Current
- Internal Thermal Protection
- Current Limit Protection
- Fully Assembled and Tested

### APPLICATIONS

- Low Current Regulators
- Low Power Handheld Devices
- Battery Powered Systems
- Cellular Phones
- Portable Electronic Equipment
- Post Regulation for Switching Power Supplies
- Power Supplies

"MPS" and "The Future of Analog IC Technology", are Registered Trademarks of Monolithic Power Systems, Inc.

### EV2005DD-00A EVALUATION BOARD

## QUICK START GUIDE

The output voltage of this board is set to 1.8V. The EN pin is connected to BIAS with a jumper for automatic startup. You can connect EN to GND to disable the MP2005

1. Attach the positive and negative ends of the load to the VOUT and GND pins, respectively.
2. Attach the input voltage ( $2V \leq V_{IN} \leq 5V$ ) and input ground to the VIN and GND pins, respectively.
3. Attach the BIAS voltage ( $3.5V \leq V_{BIAS} \leq 5.5V$ ) and BIAS ground to the BIAS and GND pins, respectively.
4. The VIN voltage and BIAS voltage can be set up to same voltage but it has to meet :

$$V_{IN}=V_{BIAS}>(1.8V + V_{OUT}) \text{ and } V_{BIAS}>2.7V$$

5. The default resistor values on the board are  $R1=26.1k\Omega$  and  $R2=10k\Omega$ . Changing these resistor values will change the output voltage. Use the following equation to determine resistor values for different output voltages:

$$V_{OUT} = 0.5V \times \left(1 + \frac{R1}{R2}\right)$$
