

EV2333C-TL-00A

High-Efficiency, 650kHz, 3A, 18V.
Step-Down Converter Evaluation Board

DESCRIPTION

The EV2333C-TL-00A Evaluation Board is designed to demonstrate the capabilities of MPS' MP2333C, a fully-integrated high-frequency, synchronous rectified, step-down, switch-mode converter with internal power MOSFETs. It offers a very compact solution to achieve a 3A continuous output current over a wide input range, with excellent load and line regulation. The MP2333C has synchronous-mode operation for higher efficiency over the output current-load range.

Constant On-Time control operation provides very fast transient response and easy loop design as well as very tight output regulation.

Full protection features include SCP, OCP, UVP, and thermal shutdown.

The MP2333C requires a minimal number of readily-available, standard, external components and is available in a space-saving SOT583 (1.6mmx2.1mm) package.

QUICK START GUIDE

1. Preset Power Supply to 12V.
2. Turn Power Supply off.
3. Connect Power Supply terminals to:
 - a. Positive (+): VIN
 - b. Negative (-): GND
4. Connect Load to:
 - a. Positive (+): VOUT
 - b. Negative (-): GND
5. Turn Power Supply on after making connections. The board will automatically start up.
6. To use the Enable function, apply a digital input to the EN pin. Drive EN higher than 1.3V to turn on the regulator, or less than 1V to turn it off.
7. To use PG indication function, connect PG to VOUT or an external VCC through a pull up resistor (R8). Recommend 3.3V pull up source.
