EV2359DJ-00B

1.2A, 24V, 1.4MHz Step-Down Converter Evaluation Board in TSOT23-6

DESCRIPTION

The EV2359DJ-00B is the evaluation board for the MP2359, a monolithic non-synchronous step-down switch mode converter with an integrated power MOSFET.

The MP2359 achieves 1.2A continuous output current over a wide input supply range with excellent load and line regulation.

Current mode operation provides fast transient response and eases loop stabilization.

Fault condition protection includes cycle-by-cycle current limiting and thermal shutdown.

The MP2359 is available in TSOT23-6 and SOT23-6 packages.

QUICK START GUIDE

1. Connect the positive terminal of the load to VOUT pin, and the negative terminal of the load to GND pin.
2. Preset the power supply output to 4.5V – 24V and turn off the power supply.
3. Connect the positive terminal of the power supply output to the VIN pin and the negative terminal of the power supply output to the GND pin.
4. Turn the power supply on. The board will automatically startup.
5. To use the Enable function, apply a digital input to EN pin. Drive EN higher than 1.2V to turn on the regulator, drive EN less than 0.4V to turn it off.
