

DESCRIPTION

The MP24830 is a 90V, white LED driver suitable for inverting step-up/down applications. It supports a wide input range with excellent load and line regulation. Its programmable current limit provides customized applications with wide power range. Current mode operation provides fast transient response and eases loop stabilization. Fault condition protection includes thermal shutdown, cycle-by-cycle peak current limiting, open strings protection and output short circuit protection.

The MP24830 incorporates both DC and PWM dimming onto a single control pin. The separate input reference ground pin allows for direct enable and/or dimming control for a positive to negative power conversion

ELECTRICAL SPECIFICATION

Parameter	Symbol	Value	Units
Input Voltage	V _{IN}	8 To (V _{IN} +V _{OUT})<50	V
Enable Voltage	V _{EN}	5	V
LED Current	I _{LED}	1	A
Switching Frequency	F _S	200	kHz
Output Voltage Protection	V _{OVP}	30	V

FEATURES

- Programmable Maximum Output Current
- Unique Operation (Buck-Boost Mode)
- Wide 8V to 24V Operating Input Range
- Adjustable Switching Frequency
- Analog and PWM Dimming
- 0.2V Reference Voltage
- 5μA Shutdown Mode
- No Minimum LED Required
- Stable with Low ESR Output Ceramic Capacitors
- Cycle-by-Cycle Over Current Protection
- Thermal Shutdown Protection
- Open Strings Protection
- Output Short Circuit Protection
- Available in QFN14

APPLICATIONS

- General LED Illuminations
- Automotive LED Lighting
- TV Backlighting System
- LCD Backlight Panels
- Handheld Computers

All MPS parts are lead-free, halogen free, and adhere to the RoHS directive. For MPS green status, please visit MPS website under Quality Assurance.

EVB TEST RESULTS

Performance waveforms are tested on the evaluation board.

$V_{EN}=5V$, $V_{IN}=12V$, $I_{OUT}=1A$, $L=22\mu H$, $T_A=25^\circ C$, Unless otherwise noted.

Efficiency vs. Input Voltage

Efficiency vs. LED String Voltage

I_{LED} Line Regulation vs. VIN

I_{LED} vs. PWM Dimming

$V_{IN}=25V$, 3LED, $F_{DIM}=0.2kHz$

I_{LED} vs. Analog Dimming

$V_{IN}=20V$, 3LED, $I_{OUT}=1A$, $F_{DIM}=0.2kHz$

EVB TEST RESULTS (continued)

Performance waveforms are tested on the evaluation board.

$V_{EN}=5V$, $V_{IN}=12V$, $I_{OUT}=1A$, $L=22\mu H$, $T_A=25^\circ C$, Unless otherwise noted.

Steady State

$V_{IN}=8V$, 3LED, $I_{OUT}=1A$

PWM Dimming

$V_{IN}=25V$, 3LED, $F_{DIM}=200Hz/50\%$

Analog Dimming

$V_{IN}=25V$, 3LED, $V_{DIM}=0.9V$

Power Ramp Up

$V_{IN}=8V$, 3LED

Open LED Protection

$V_{IN}=25V$, 3LED, $I_{LED}=1A$

Enable Power Up

$V_{IN}=25V$, 3LED

Enable Power Down

$V_{IN}=25V$, 3LED

Short LED Protection

$V_{IN}=16V$, 3LED

Short LED To VSS

$V_{IN}=25V$, 3LED

Figure 4—Bottom Layer

QUICK START GUIDE

1. Connect the LED string between “LED+” (anode of LED string) and “LED-”(cathode of LED string). The LED string voltage should be Less than 30V (8 LED string voltage is about 28V), since the output voltage protection is about 30V.
2. Set a VIN power supply voltage (range from 8V to $V_{IN}+V_{OUT} < 50V$) and connect the input between the “VIN” and “INGND” terminals as shown in the EVB board.
3. Set a second power supply 5V as the EN input supply to the EVB.
4. Turn-off all power supplies.
5. Turn-on the input voltage power supply.
6. Turn on the 5V EN power supply. All the LED strings should be lighted.
7. The switching frequency was set by R6, which is about 200kHz.
8. To demo the dimming function on DIM connector: using a function generator set the PWM signal amplitude to 5V and the frequency within 100Hz to 20kHz range for PWM dimming. For analog dimming, adjust the power supply from 0.7V to 2V.
