

EV2722-RH-00A

I²C-Controlled, 1-Cell, 5A, NVDC Buck Charger with USB-C DRP Detection Evaluation Board

DESCRIPTION

The EV2722-RH-00A is an evaluation board designed to demonstrate the capabilities of the MP2722, a highly integrated, 5A, switch-mode battery management device for a single-cell Li-ion or Li-polymer batteries. The narrow-voltage DC (NVDC) power management structure provides a low-impedance power path, which optimizes charging efficiency, reduces battery charging time, and extends battery life during discharging.

The MP2722 is fully compliant with USB Type-C 1.3 and supports dual-role port (DRP) functionality, as well as Try.SNK and Try.SRC mode. USB Battery Charging Specification 1.2 (BC1.2) and non-standard adapter detection

are also supported by the input source type identification algorithm.

The I²C interface offers complete operating control, charging parameter configuration, and status/interrupt monitoring.

The MP2722 supports a fully customizable JEITA profile with configurable temperature windows and actions.

The EV2722-RH-00A supports input sources up to 16V, including standard USB host ports and high-voltage wall adapters with fast charge capability. The EV2722-RH-00A supports boost mode and On-The-Go (OTG) operation by supplying a voltage between 5V and 5.35V at the IN pin, with up to 3A of current.

PERFORMANCE SUMMARY

Parameters	Value
Input voltage (V_{IN}) supply	4V to 16V
Battery voltage (V_{BATT})	0V to 4.6V
Charge current (I_{CC})	0A to 5A
Input current (I_{IN})	0A to 3.2A
Boost output current (I_{BOOST_OUT})	0A to 3A

EVALUATION BOARD

QUICK START GUIDE

The EV2722-RH-00A evaluation board is designed for the MP2722. The layout of the EV2722-RH-00A accommodates most commonly used capacitors. The default function of this board is preset for charger mode, and the charge-full voltage is preset to 4.2V for a single-cell Li-ion battery.

Table 1 shows the input/output connections of the EV2722-RH-00A.

Table 1: Input/Output Connections

Connectors	Description
J1/VIN	Positive input source terminal
J2/GND	Negative input source terminal
J3/SYS	Positive system load terminal
J4/GND	Negative system load terminal
J5/BATT	Positive battery pack terminal
J6/GND	Negative battery pack terminal
P1	USB Type-C connector
SCL/SDA/GND	I ² C connector

Table 2 shows the jumper set-ups of the EV2722-RH-00A.

Table 2: Jumper Installations

Jumper	Description	Default
JP1	I ² C pull up to VCC	Off
JP2	NTC1 on board resistor divider	On
JP3	NTC2 on board resistor divider	On
JP4	LED indication for STAT/IB	On
JP5	IB resistor for STAT/IB. JP4 and JP5 should not be installed simultaneously	Off
JP6	LED indication for PG/NTC2	On
JP7	NTC2 connection to PG/NTC2. JP6 and JP7 should not be installed simultaneously	Off
JP8	BATTSNS connection to BATT	On

Evaluation Platform Preparation

1. The MP2722 evaluation software must be properly installed on the computer.
2. Prepare the USB-to-I²C communication interface (EVKT-USBI2C-02) (see Figure 1).

Figure 1: USB-to-I²C Communication Interface

3. Configure the test set-up for the MP2722 (see Figure 2 on page 3).

Figure 2: Measurement Equipment Set-Up

Start-Up Procedure

1. Set the battery simulator output to 3.8V with a charge/discharge current limit at 6A, then turn off the battery simulator. Connect the battery simulator to BATT and GND.
2. Set the DC power source output to 5V with an output current limit at 5A, then turn off the DC power source. Connect the DC power source to VIN and GND.
3. Connect the system load (typically an e-load device) to SYS and GND, then set the system load to 0A.
4. Turn on the battery simulator.
5. Turn on the DC power source.
6. If necessary, turn on the system load.
7. Launch the MP2722 evaluation software. Figure 3 shows the GUI software's main window.

Figure 3: MP2722 Evaluation Software

GUI Operating Instructions

1. Ensure that all the connections are successful, including the connection between the USB-to-I²C communication interface and the EV2722-RH-00A. Successful connections are indicated in green on the lower-left side of the GUI window (see Figure 3 on page 3). The program is ready to be run once all of the connections are successful.
2. After all connections are successful, click the “Read All” button to update the GUI to the default settings.
3. After modifying the settings with the GUI, click the “Update All” button to write the setting to the MP2722's registers.

EVALUATION BOARD SCHEMATIC
