

The Future of Analog IC Technology

This board can be used for MP3388S w/o external component change

# EV3388DR-01A

## 8 strings White LED Driver Evaluation Board

### DESCRIPTION

The EV3388DR-01A is an evaluation board for the MP3388DR, a step-up converter designed for large liquid-crystal displays that employ an array of LEDs as the light source. It can drive up to 8 strings in parallel and 10 LEDs per string.

The MP3388 uses internal switch current mode, fixed frequency architecture and includes current ballast in each string terminal, which achieves ±3% current regulation accuracy between strings. Low feedback voltage at each LED string help reduce power loss and improve efficiency.

The MP3388 has multiple features to protect the converter from fault conditions, including under-voltage lockout, current limiting, over voltage, short LED, open LED and thermal shut-down protection.

The MP3388 is available in small QFN24 (4mmx 4mm), TSSOP28 and SOIC28 package.

### ELECTRICAL SPECIFICATIONS

Parameter	Symbol	Value	Units
Input Voltage	V <sub>IN</sub>	4.5 – 25	V
LEDs #		8 strings parallel and 10 LEDs each string	
LED Current /String	I <sub>LED</sub>	20	mA

### FEATURES

- 4.5V to 25V Input Voltage Range
- Up to 89% Efficiency
- Programmable Over Voltage Protection
- Drives up to 8 Strings Parallel and 10 LEDs in Series.
- ±3% Current Regulation Accuracy Between Strings
- Selectable Switching Frequency: 1.25MHz and 625kHz
- Open and Short LED Load Protection
- Thermal Shutdown

### APPLICATIONS

- Notebook PC
- Small LCD TV
- Handy Terminals Display
- Automotive Systems and Tablet Computer

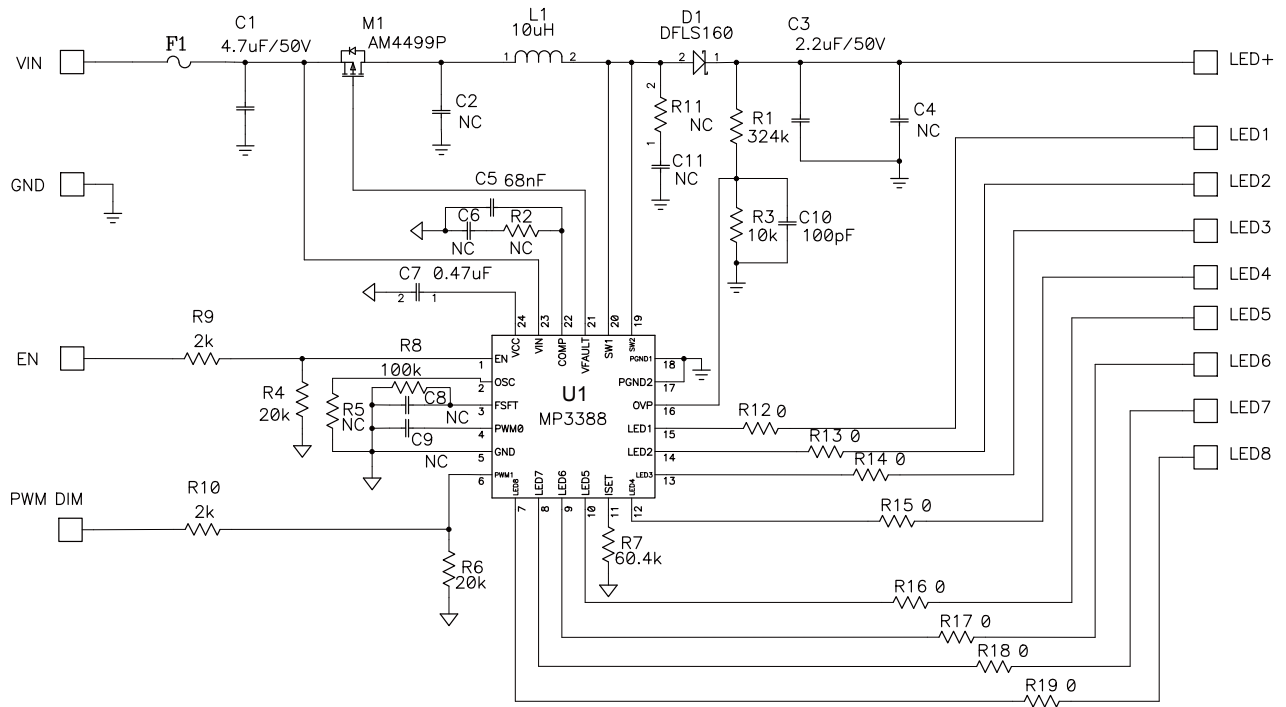

All MPS parts are lead-free, halogen free, and adhere to the RoHS directive. For MPS green status, please visit MPS website under Quality Assurance. "MPS" and "The Future of Analog IC Technology" are Registered Trademarks of Monolithic Power Systems, Inc.

### EV3388DR-01A EVALUATION BOARD

(L x W x H) 5.7cm x 3.2cm x 1.0cm

Board Number	MPS IC Number

## EVB TEST RESULTS

Performance waveforms are tested on the evaluation board.

$V_{IN} = 15V$ , 10 LEDs in series, 8 strings parallel, 20mA/string, unless otherwise noted.

**Efficiency vs. Input Voltage**

**Steady State**

**Vin Startup**

**Ven Startup**

**PWM Dimming**

$f_{PWM} = 2kHz$ ,  $D_{PWM} = 50\%$

**Open LED Protection**

open all LED strings at working

**Short LED Protecton**

short Vout to LEDx at working

**Short LED Protection**

short Vout to GND at working

**PRINTED CIRCUIT BOARD LAYOUT**

**Figure 2—Bottom Layer**

## QUICK START GUIDE

1. Connect the positive and negative terminals of the load panel (10 white LEDs in series, 8 strings paralleled) to the LED+ and LED1~8 pins on the EV board, respectively.
2. Connect the positive and negative terminals of the power supply (4.5V ~ 25V) to the VIN and GND pins on the EV board, respectively.
3. Drive EN pin high ( $2.5V < V_{en} < 5V$ ) to enable the MP3388.
4. For PWM dimming, apply a PWM rectangular waveform with a minimum voltage less than 0.5V and a maximum greater than 2.5V on PWM DIM pin. The frequency of the PWM signal is recommended between 200Hz to 2kHz and Duty of PWM range from 10% to 100%.
