EV4000DS-00C
350mA Off-Line WLED Driver
Evalvation Board For 180-260VAC Input

The Future of Analog IC Technology

DESCRIPTION

The EV4000DS-00C is an evaluation board for the MP4000. The EV4000DS-00C is a high efficiency step-down converter designed for driving high brightness Light Emitting Diodes (LEDs).

The EV4000DS-00C can supply a maximum output current of 350mA to drive 10 to 40V LED strings from a wide input voltage 180 to 260VAC with 50/60Hz.

ELECTRICAL SPECIFICATION

Parameter	Symbol	Value	Units
Input Voltage	VAC	180 – 260	V
Output Voltage	V_{OUT}	10 – 40	V
Output Current	I_{OUT}	350	mA

FEATURES

- Constant-current LED Driver
- Power MOSFET Zero-Current Turn On
- High Efficiency and Reliability in Boundary Mode Operation
- Low 0.9mA Operation Current
- PWM or DC Input Burst Dimming Control
- Hiccup Short Circuit Protection
- UVLO, Thermal Shutdown
- Maximum Frequency is Limited to 110kHz
- Available in SOIC8 Package

APPLICATIONS

- DC/DC or AC/DC LED Driver Application
- General Illumination
- Industrial LED Lighting
- LED Light

For MPS green status, please visit MPS website under Quality Assurance. "MPS" and "The Future of Analog IC Technology", are Registered Trademarks of Monolithic Power Systems, Inc.

Warning: Although this board is designed to satisfy safety requirements, the engineering prototype has not been agency approved. Therefore, all testing should be performed using an isolation transformer to provide the AC input to the prototype board.

EVB TEST RESULTS

Performance waveforms are tested on the evaluation board.

V_{IN} = 180V_{AC} to 260V_{AC}, V_{OUT} = 10V to 40V, L = 680µH, T_A = 25°C, unless otherwise noted.

QUICK START GUIDE

1. Turn off the AC Power Supply.

2. Connect the LED string between "+" (anode of LED string) and "-" (cathode of LED string).

3. Connect the AC input voltage between the AC terminals ("N" and "L") as shown on the board.

4. Set AC Power Supply to $180V \leq$ AC input $\leq 260V$.

5. Turn on the AC Power Supply.

CAUTION:

There is no galvanic isolation on the EVB board. Be careful when doing the test. To prevent damage to equipments and EVB board, isolation is suggested to either the test equipments or the EVB board.
