EV5470-L-00A

12V Power Management IC Evaluation Board

DESCRIPTION

The EV5470-L-00A is an evaluation board for MP5470, a complete power management solution which integrates four high efficiency step-down DC/DC converters and flexible logic interface.

COT control DC/DC converter provides fast transient response. Up to 1.6MHz programmable switching frequency greatly reduces external inductor and capacitor size.

Full protection features include UVLO, OCP and thermal shut down.

Output voltage is adjustable through I2C bus or preset by 3 times programmable MTP (Multi Time Programmable) eFuse. The power on/off sequence is also programmable by MTP.

The MP5470 requires a minimal number external components, and is available in space saving 22-pin QFN (3x4mm) package.

FEATURES

- **High Efficiency Step-Down Converters**
 - Quad 2A Buck Converters
 - 3A/3A/1A/1A or 3A/2A/2A/1A from Channel1-Channel4*
 - Out of Phase Synchronization
 - Support I²C Voltage Scaling
 - 6.5V to 16V Operating Input Range
 - Low Rds(on) and High Efficiency
 - Integrated Bootstrap Capacitor
 - 500kHz to 1.6MHz Switching Frequency
 - 500kHz to 1.6MHz Frequency SYNC Input on EN pin
 - I2C Slave Address Programmable
 - 1 GPIO pin which can be configured as "ADD", "PG", "Output Port" or "SYNCO".
 - Power Save Mode or Forced CCM Mode
 - CH1&CH2 can Program to Parallel Mode by MTP
 - CH3&CH4 can Program to Parallel Mode by MTP
 - MTP Programmable Soft-start and Delay
 - MTP Selectable Shutdown Delay
 - MTP&I2C Programmable Current Limit
 - Hiccup Over Current Protection
- **System**
 - I2C Slave and 3 times Programmable MTP
 - Flexible Power On/off Sequence via MTP
 - EN pin

*The maximum current is 3A/3A/2A/2A for Buck1-Buck4. But it's also limited by the maximum junction temperature (<125degC).

APPLICATIONS

- SSD
- Cable Modem
- xDSL
- Set-Top-Box

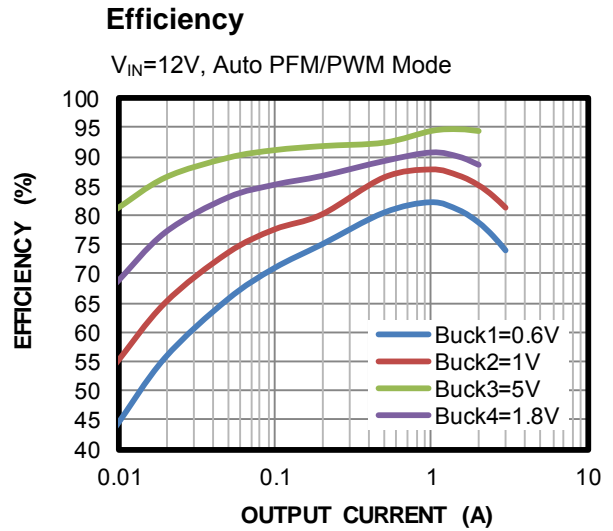

All MPS parts are lead-free and adhere to the RoHS directive. For MPS green status, please visit MPS website under Products, Quality Assurance page.

EVB TEST RESULTS

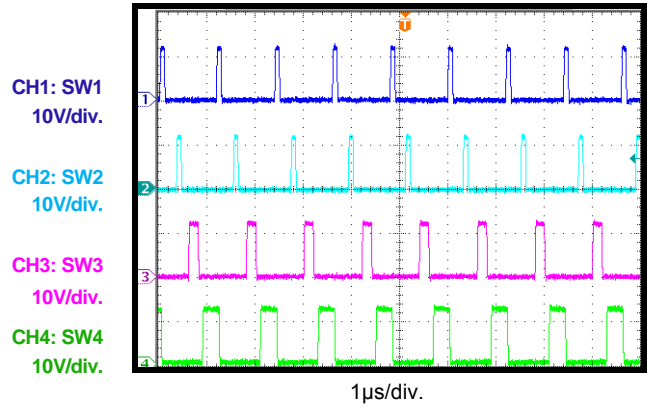

Performance waveforms are tested on the evaluation board.

VIN1=VIN2=12V, T_A=25°C, Buck1 to Buck4 output 0.78V/0.78V/1.8V/3.3V.

Steady state
Each Channel Buck with Half Load

Steady state
Each Channel Buck with Full Load

EN Power On
Each Channel Buck without Load

EN Power Off
Each Channel Buck without Load

Load Transient Response

Buck1, I_{out} transient from 1.5A to 3A, Slew rate=0.8A/µs

Load Transient Response

Buck2, I_{out} transient from 1.5A to 3A, Slew rate=0.8A/µs

EVB TEST RESULTS *(continued)*

Performance waveforms are tested on the evaluation board.

VIN1=VIN2=12V, T_A = 25°C, Buck1 to Buck4 output 0.78V/0.78V/1.8V/3.3V.

Load Transient Response

Buck3, I_{OUT3} transient from 1A to 2A, Slew rate=0.8A/μs

Load Transient Response

Buck4, I_{OUT4} transient from 1A to 2A, Slew rate=0.8A/μs

SCP Entry

Buck4 output 3.3V, I_o=0A

SCP Steady State

Buck4 output 3.3V, I_o=0A

SCP Recovery

Buck4 output 3.3V, I_o=0A

QUICK START GUIDE

1. Preset Power Supply between 6.5V and 12V.
2. Turn Power Supply off.
3. Connect Power Supply terminals to:
 - a. Positive (+): VIN
 - b. Negative (-): GND
4. Connect Load to:
 - Load1:
 - a. Positive (+): Vout1
 - b. Negative (-): GND
 - Load2:
 - a. Positive (+): Vout2
 - b. Negative (-): GND
 - Load3:
 - a. Positive (+): Vout3
 - b. Negative (-): GND
 - Load4:
 - a. Positive (+): Vout4
 - b. Negative (-): GND
5. Turn Power Supply on after making connections. The board will automatically start up.
6. To use the Enable function, apply a digital input to the EN/SYNC pin. Drive EN higher than 1.25V to turn on the regulator, or less than 1.02V to turn it off.
7. To use the external synchronous function to adjust the switching frequency, apply an external clock signal to EN/SYNC pin. The MP5470 default switching frequency should be set close to the SYNC input's frequency. For example, when external SYNCI clock is 500kHz, then internal switching frequency should be set as 533kHz via I2C or MTP.
