EV6519-Q-00A

5A, 28V

H-Bridge Current Regulator  
Evaluation Board

## DESCRIPTION

The EV6519-Q-00A is an evaluation board for the MP6519, a monolithic, step-down, current-source driver. It operates from a supply voltage of up to 28V and can deliver current up to 5A.

The four integrated MOSFET H-bridge control provide a fast dynamic load response and an ultra-high efficiency solution. For ease of use, the output polarity can be controlled by pulling MODE high or low.

Full Protection features include load open, load-short protection, OCP, OTP, OVP.

## ELECTRICAL SPECIFICATIONS

Parameter	Symbol	Value	Units
Input Voltage	$V_{IN}$	2.5 – 28	V
Maximum Output Current	$I_{OUT-L}$	5	A

## FEATURES

- Wide 2.5V to 28V Input Voltage Range
- Up to 5A Output Peak Current
- $\pm 2\%$  Accuracy at Full-Scale Reference
- $65m\Omega$   $R_{DS(ON)}$  for Each MOSFET of H-Bridge
- 30kHz to 300kHz Programmable Switching Frequency
- 20k-100kHz PWM Input for Current Regulation
- Programmable Full-Scale Current
- Selectable Current Polarity Mode
- Open-Load Protection, OCP, OTP, OVP

## APPLICATIONS

- Current Regulators
- DC Motors
- Solenoid/Actuators

All MPS parts are lead-free, halogen free, and adhere to the RoHS directive. For MPS green status, please visit MPS website under Quality Assurance. "MPS" and "The Future of Analog IC Technology" are Registered Trademarks of Monolithic Power Systems, Inc.

## QUICK START GUIDE

### 1. Power Requirements

- a. Power supply range: 2.5V to 28V, 5A Max.

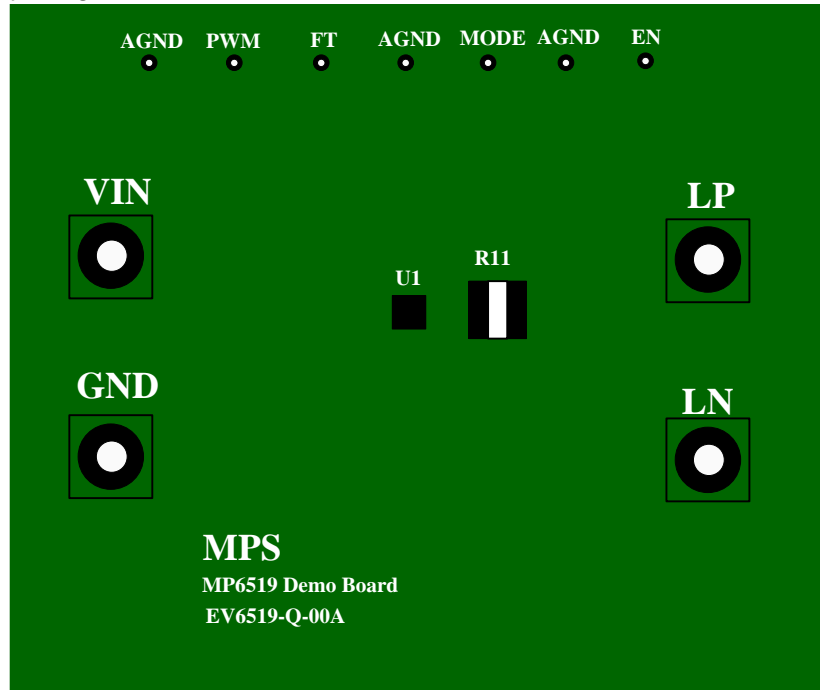

Figure 5 — EV6519-Q-00A Bird's-eye View

### 2. Setup Condition

- a. Adjust the power supply VIN with recommended operating range (2.5V to 28V).
- b. Connect proper load to LN and LP terminals.
- c. Apply external PWM signal with frequency range, 20kHz to 100kHz.
- d. Apply EN voltage (5V or 3.3V tolerance).
- e. Current direction is controlled by MODE pin, L=reverse, H=forward. MODE=H as default.
- f. The full-scale current reference value is set by R11. If the full-scale current reference is set, the actual output current sent to the error amplifier can be further controlled by applying a PWM input signal to PWM. Refer to the DS for details.

### 3. Monitors

- a. FT on the evaluation board indicates Over Temperature Protection and Over Current Protection. This is an open drain output with onboard 10k ohm pull-up resistor.
