

The Future of Analog IC Technology®

EV100L-N-00A Offline Inductor-Less Regulator EV Board

DESCRIPTION

The MP100L is a compact, inductor-less, good-efficiency, off-line regulator. It steps down the AC line voltage to an adjustable DC output. It is a simple solution to provide a bias voltage to ICs in off-line applications. Its integrated smart-control system uses AC line power only when necessary, thus minimizing device losses to achieve good efficiency. This device can help system designs meet new standby power specifications.

The MP100L provides various protections, such as Thermal Shutdown (TSD), VD Over Voltage Protection (OVP), VD Short to GND Protection, Over Load Protection (OLP), Short Circuit Protection (SCP).

The MP100L is available in SOIC8E package.

ELECTRICAL SPECIFICATION

Parameter	Symbol	Value	Units
Supply Voltage	V _{IN}	85~265	VAC
Output Voltage	V _{OUT}	12	V
Output Current	I _{OUT}	20	mA

FEATURES

- Universal AC Input (85VAC-to-305VAC)
- Inductor-Less
- Less than 100mW Standby Power
- Excellent EMI
- Low BOM Cost
- Smart Control to Maximum Efficiency
- Adjustable Output Voltage from 1.5V to 15V
- Good Line and Load Regulation
- Thermal Shutdown Protection
- Short-Circuit Protection
- Provide Power-Good Signal

APPLICATIONS

- Wall Switches and Dimmers
- Z-Wave Device and ZigBee Device for Home Automation
- Standby Power for General Off-line Applications

All MPS parts are lead-free and adhere to the RoHS directive. For MPS green status, please visit MPS website under Quality Assurance. "MPS" and "The Future of Analog IC Technology" are Registered Trademarks of Monolithic Power Systems, Inc.

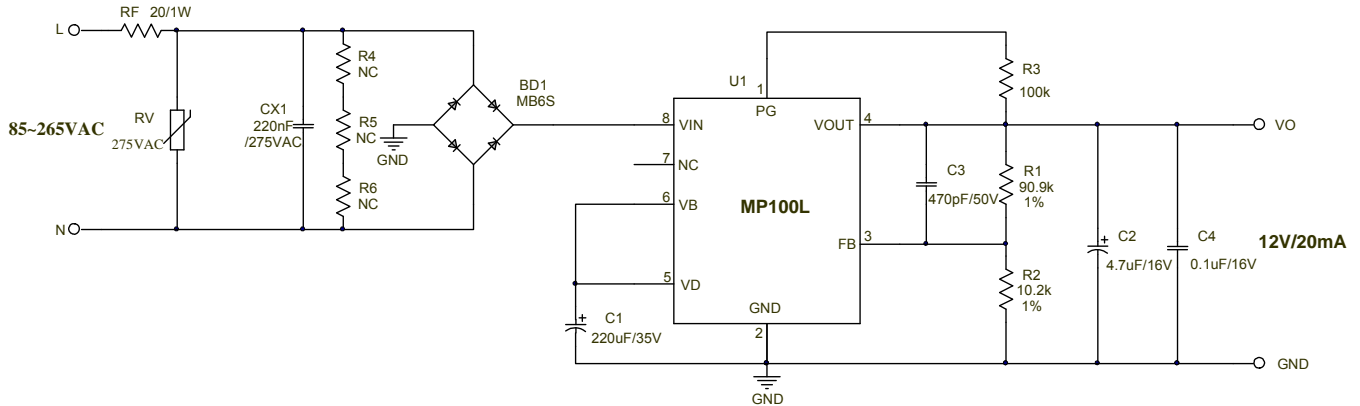

EV100L-N-00A EVALUATION BOARD

(L x W x H) 21mm x 14mm x 20mm

Board Number	MPS IC Number
EV100L-N-00A	MP100GN

EVALUATION BOARD SCHEMATIC

VOUT can be adjusted by choosing the value of R1 and R2, the relationship of them is:

$$V_{OUT} = 1.235V * (1 + R1/R2)$$

For example, to get 5V output voltage, we can choose, R4=10.2k, R5=30.9k.

The maximum output power of MP100L Vs input voltage is depicted by following chart for 12V, 5V and 3.3V output applications respectively.

The test condition is: in open frame, full bridge rectifier, ambient temperature is 25 °C, the temperature rise of MP100L is less than 60 °C on the test board.

EV100L-N-00A BILL OF MATERIAL

Qty	Ref	Value	Description	Package	Manufacture	Manufacturer_PN
1	BD1	MB6S	Diode;600V;0.5A;	SOIC-4	TaiWan Semiconductor	MB6S

EVB TEST RESULTS

Performance waveforms are tested on the evaluation board.

$V_{OUT} = 12V$, $I_{OUT} = 20mA$, $T_A = 25^\circ C$, unless otherwise noted.

Efficiency vs. Load

No Load Power vs. Input Voltage

Input Power Start Up

$V_{IN} = 115V_{AC}$

Input Power Start Up

$V_{IN} = 230V_{AC}$

Steady State

$V_{IN} = 115V_{AC}$

Steady State

QUICK START GUIDE

1. Preset Power Supply to $85V \leq V_{IN} \leq 265V$.
2. Turn Power Supply off.
3. Connect the Line and Neutral terminals of the power supply output to L and N ports.
4. Connect Load to VO and GND ports.
5. Turn Power Supply on after making connections.
