

### GENERAL DESCRIPTION

The EV2403DN-00A is an evaluation board for the MP2403, a monolithic synchronous buck regulator. The MP2403 integrates a 150mΩ high-side MOSFET and a 80mΩ low-side MOSFET that provide 3A continuous load current over a wide operating input voltage of 4.6V to 32V. Current mode control provides fast transient response and cycle-by-cycle current limit. An adjustable soft-start prevents inrush current at turn-on. In shutdown mode, the supply current drops to 1μA.

This device, available in an 8-pin SOIC package, provides a very compact system solution with minimal reliance on external components.

## QUICK START GUIDE

The output voltage of this board is preset to 3.3V. The board is laid out to accommodate most commonly used inductors and output capacitors.

1. Connect the positive and negative ends of the load to the V<sub>OUT</sub> and GND pins, respectively.
2. Connect the input voltage ( $4.6V \leq V_{IN} \leq 32V$ ) and input ground to the VIN and GND pins, respectively.
3. To turn on the MP2403, apply an enable voltage  $V_{EN}$  to the EN pin. Drive EN higher than 2.0V to turn on the MP2403 or lower than 1.1V to turn it off.
4. The output voltage  $V_{OUT}$  can be programmed by varying R1. Calculate the new value using the formula:

$$R1 = R2 \times \left( \frac{V_O}{V_{FB}} - 1 \right)$$

Where  $V_{FB} = 0.8V$  and  $R2 = 10k\Omega$ .

For example, for  $V_{OUT} = 3.3V$ :

$$R1 = R2 \times \left( \frac{V_O}{V_{FB}} - 1 \right) = 10k\Omega \times \left( \frac{3.3}{0.8} - 1 \right) = 31.25k\Omega$$

for the closest standard 1% value.

## RECOMMENDED COMPONENTS FOR STANDARD OUTPUT VOLOTAGES

This board is programmed for most standard output voltages. The following table lists recommended components for some standard output voltages.

**Table 1—Recommended Components for Standard Output Voltages**

Vout	R1 (1%)	R2 (1%)
0.8V	0	10k $\Omega$
1.2V	5k $\Omega$	10k $\Omega$
1.8V	12.5k $\Omega$	10k $\Omega$
2.5V	21.25k $\Omega$	10k $\Omega$
3.3V	31.25k $\Omega$	10k $\Omega$
5.0V	52.5k $\Omega$	10k $\Omega$
