

DESCRIPTION

The EV2681-S-00A is an evaluation board for MP2681 which is a voltage and current control IC integrated a precision voltage reference and charge status indications. It is suitable for AC adapter input in the plug-in, cradle charger applications.

The device automatically detects the battery cell through the battery ID resistor and regulates the battery voltage according to the cell information: 3S1P, 3S2P, 4S1P, 4S2P, 5S1P and 5S2P. Then the AC adapter output is automatically set according to the battery specification. Additionally, for the battery spec which is inside the six kinds but without the ID resistor, user can artificially connect a resistor from ID pin to GND to make a right ID voltage input for cell detection and MP2681 could set the output voltage accordingly. The DC voltage and the current level at the output of the forward-switching power supply are compared to the voltage reference and current limitation, respectively. MP2681 feeds the control signal back to the controller IC at the primary side through an opto-coupler. Furthermore, MP2681 provides fixed pre-charge mode for the deep-discharged battery.

The safety feature includes battery temperature monitoring-NTC control, charge time-out and fault control, it also provides charge status indication.

ELECTRICAL SPECIFICATION

Parameter	Symbol	Value	Units
Input Voltage	V_{ACIN}	85V-220V	V
Battery Voltage	V_{BATT}	0 to 21	V
VDD Voltage	V_{SYS}	5 to 30	V
Charge Current	I_{CHG}	0-3	A

FEATURES

- Constant Voltage and Constant Current Control
- Pre-Charge Mode for Deep-discharged Battery
- Automatic Battery Cell Detection
- Two 1MHz Bandwidth Operational Amplifier Output Connected with OR Logic
- Wide Input Voltage Range: 4.5V to 30V
- Auto-Recharge
- Charge On/Off Control
- Programmable Internal Timer
- Battery Temperature Monitoring
- Charge Status Indication
- Power Line Fault Detection
- Over Temperature Protection

APPLICATIONS

- Battery Charger for Portable Tools
- Standalone Fast Charger

All MPS parts are lead-free and adhere to the RoHS directive. For MPS green status, please visit MPS website under Products, Quality Assurance page.

EVB TEST RESULTS

Performance waveforms are tested on the evaluation board.

$V_{DD} = 18V$, $T_A = 25^\circ C$, unless otherwise noted.

Battery Charge Curve

5 Cell, $I_{CHG} = 4A$

Auto-Recharge

5 Cell, $I_{CHG} = 4A$

Pre-Charge Steady State

$V_{BATT} = 7V$

CC-Charge Steady State

$V_{BATT} = 15V$

CV-Charge Steady State

$V_{BATT} = 16.6V$

Charge Full

$V_{BATT} = 16.6V$

Auto-Recharge

$V_{BATT} = 15.5V$

AC-IN Power ON

3 Cell, $V_{BATT} = 6V$

AC-IN Power ON

$V_{BATT} = 15V$

EVB TEST RESULTS *(continued)*

Performance waveforms are tested on the evaluation board.

$V_{DD} = 18V$, $T_A = 25^\circ C$, unless otherwise noted.

AC-IN Power OFF

$V_{BATT} = 8V$

AC-IN Power OFF

5 Cell, $V_{BATT} = 19V$, $I_{CHG} = 4A$

AC-IN Power ON/ OFF

$V_{BATT} = 16.6V$

Battery Insertion/ Removal

3 Cell, $V_{BATT} = 6V$

Battery Insertion/ Removal

$V_{BATT} = 15V$

Battery Insertion/ Removal

$V_{BATT} = 16.6V$

NTC Fault Control

$V_{BATT} = 15.5V$,
Ramp up and down NTC voltage

NTC Fault Indication

$V_{BATT} = 15.5V$

Timer Out Protection

$C_{TMR} = 150pF$, $V_{BATT} = 10V$

EVB TEST RESULTS *(continued)*

Performance waveforms are tested on the evaluation board.

$V_{DD} = 18V$, $T_A = 25^\circ C$, unless otherwise noted.

Timer Out Protection

$C_{TMR} = 150pF$, $V_{BATT} = 15V$

Timer Out Indication

$C_{TMR} = 150pF$, $V_{BATT} = 15.5V$

ID Short Protection

$V_{BATT} = 10V$

ID Short Protection

$V_{BATT} = 15V$

ID Short Indication

$V_{BATT} = 15V$

ID Open Protection

$V_{BATT} = 10V$

NTC Fault Control

$V_{BATT} = 15.5V$,
Ramp up and down NTC voltage

NTC Fault Indication

$V_{BATT} = 15.5V$

Timer Out Protection

$C_{TMR} = 150pF$, $V_{BATT} = 10V$

QUICK START GUIDE

The MP2681 is a voltage and current control IC integrated a precision voltage reference and charge status indications, which is suitable for AC adapter input in the plug-in, cradle charger applications.

The device automatically detects the battery cell numbers through the battery ID resistor and regulates the battery voltage according to the cell information: 3S1P, 3S2P, 4S1P, 4S2P, 5S1P and 5S2P.

ID Resistor	Detection Voltage	Operation Mode	Battery Spec	Output Voltage
Float	VID>4.145V	Sleep Mode	Unknown	3.2V/cell
73.2K	3.534V<VID<4.145V	Automatic mode	3S1P	12.45V
28.7K	2.54V<VID<3.25V		3S2P	12.45V
13K	1.685V<VID<2.195V		4S1P	16.6V
7.87K	1.185V<VID<1.605V		4S2P	16.6V
3.9K	0.64V<VID<0.965V		5S1P	20.75V
1.62K	0.265V<VID<0.475V		5S2P	20.75V
Short	VID<0.265V	Sleep Mode	Unknown	3.2V/cell

- The charge current is set to 3A as the below formula in this board,

$$I_{\text{CHG}} = 0.16/\text{RS} = 3\text{A}$$

Note: the reference voltage 0.16V has a +/-15% variation.

- In this board, there are two LEDs controlled by the MP2681 to work as smart charger status indicators.
 - During the charging, LEDG flashes. At the same time, LEDR keeps off.
 - When the charging is finished, LEDG keeps on and LEDR is off.
 - When fault protection happens, LEDR flashes and LEDG keeps off.
- Attached the AC Line (85~220V) terminals to L and N pins, respectively.
- Connect the positive terminal of the battery to BATT+ pin, and connect the negative terminal of the battery to BATT- pin, respectively.
- Turn the power supply on. The board automatically startup.
- The output voltage on this board is determined by voltage at the ID pin.

For more details, please apply the latest datasheet of the MP2681 for reference.
