

DESCRIPTION

The EV3202-00A is an evaluation board for the MP3202, a step-up converter designed for driving up to 39 white LEDs (13 strings of 3 LEDs each) from a 5V system rail, or 27 white LEDs from 4.5V to 6V.

The MP3202 uses current mode, fixed frequency architecture to regulate the LED current, which is measured through an external current sense resistor. Its low 104mV feedback voltage reduces power loss and improves efficiency. The OV pin monitors the output voltage and turns off the converter if an over-voltage condition is present due to an open circuit condition.

The MP3202 includes under-voltage lockout, current limiting and thermal overload protection preventing damage in the event of an output overload.

ELECTRICAL SPECIFICATIONS

Parameter	Symbol	Value	Units
Input Voltage	V_{IN}	4.5 – 6	V
Number of LEDs		27	

FEATURES

- 4.5V to 6V Input Voltage Range
- Drives up to 27 White LEDs
- Up to 92% Efficiency
- Soft-Start/PWM Dimming
- Fully Assembled and Tested

APPLICATIONS

- Cell Phones
- Handheld Computers and PDAs
- Digital Still Cameras
- Small LCD Displays

"MPS" and "The Future of Analog IC Technology" are Registered Trademarks of Monolithic Power Systems, Inc.

QUICK START GUIDE

1. Solder LED1 – LED27 to board.
2. Connect the positive and negative terminals of the power supply (4.5V to 6V) to the VIN and GND pins, respectively.
3. This board is set up for automatic startup. Pull EN low to shut down the MP3202.
4. To use burst mode brightness control, drive EN with a PWM signal.
