

DESCRIPTION

The EV5600EUT-00A is an evaluation board for the MP5600, which is power supply for LCD TV panel bias. It contains a step-down switching regulator to generate the logic supply rail, a step-up switching regulator to generate the source driver supply, two charge-pump controllers to generate a positive output and negative output respectively, and a programmable delay gate pulse management switch. Each regulator features adjustable output, internal soft-start, and timer-delayed fault protection.

The MP5600 has UVLO, Short Circuit Protection, Over Voltage Protection and thermal shutdown protection.

The MP5600 is available in a 40 pins, 5mm x 5mm, thin QFN package.

FEATURES

- 8V to 18V Input Voltage Range
- 7.5V Input Under-voltage Lockout
- Output isolation during Shutdown
- 500kHz or 750kHz Selectable Frequency
- 3.3V 2.5A Step-Down Regulator
- 16V 1.5A Step-up Regulator
- 35V 120mA Positive Charge Pump
- -6V 120mA Negative Charge Pump
- External Capacitor charge control VG OFF and VG ON Start Delay
- Dual Mode, Logic-Controlled, No-Jitter High-Voltage Switch with Programmable Delay
- Power Good signal
- OVP, UVLO, SCP
- 155°C Thermal-Overload Protection
- 40-Pin, 5mm x 5mm, Thin QFN Package

APPLICATIONS

TV LCD PANEL

All MPS parts are lead-free and adhere to the RoHS directive. For MPS green status, please visit MPS website under Products, Quality Assurance page.

QUICK START GUIDE

1. Connect all load to corresponding output channel respectively.
Buck channel: VBUCK, GND
Boost channel: VBOOST, GND
Positive Charge Pump channel: VGH, GND
Negative Charge Pump channel: VGL, GND
2. Connect the positive and negative terminals of the power supply (8V ~ 18V) to the VIN and GND pins, respectively.
3. Select the JUMP EN1 and EN2 to VCC to enable buck and boost channel
4. JP1 set the switching frequency, VCC for high frequency, GND for low frequency.
5. JP2 set the GPO MODE, VCC for MODE1, GND for MODE2.
6. JP3 set the GPD discharge channel, Diode for discharging per VBOOST.
7. For Gate Pulse Management, GPI pin is the control signal input.
8. The power good signal can be monitored on PG pin.
