EVM3683-7-QN-01A

16V, 8A DC/DC Power Module
Evaluation Board

DESCRIPTION

The EVM3683-7-QN-01A Evaluation Board is designed to demonstrate the capabilities of MPS' MPM3683-7. The MPM3683-7 is an easy-to-use fully integrated peak 10A, continuous 8A step-down DC/DC power module. MPM3683-7 can deliver output current over a wide input supply voltage range with excellent load and line regulation.

The MPM3683-7 uses Constant-On-Time (COT) control to provide fast transient response and ease the loop stabilization.

The operating frequency is set easily to 600 kHz, 800 kHz, or 1000 kHz with the MODE configuration, allowing the MPM3683-7 frequency to remain constant regardless of the input/output voltages.

The MPM3683-7 is available in a space-saving QFN-28 (7mmx7mmx4mm) package.

ELECTRICAL SPECIFICATION

Parameter	Symbol	Value	Units
Input Voltage	V _{IN}	4-16	V
Output Voltage	V _{OUT}	1.2	V
Output Current	I _{OUT}	10	A

FEATURES

- Wide Input Voltage Range from 2.7 V:
 - 2.7 V to 16 V with External 3.3 V Bias
 - 4 V to 16 V with Internal Bias or External 3.3 V Bias
- Differential Output Voltage Remote Sense
- Peak 10A, Continuous 8A Output Current
- Adaptive Constant-on-Time (COT) for Ultrafast Transient Response
- Selectable Pulse Skip or Forced CCM Operation
- Output Voltage Discharge
- Pre-Bias Start-Up
- Selectable Switching Frequency from 600kHz, 800 kHz, and 1000 kHz
- Non-Latch OCP, UVP, UVLO, Thermal Shutdown, and OVP.
- Output Adjustable from 0.6 V to up to 5.5 V Max.
- QFN-28 (7mm x 7mm x 4mm) package

APPLICATIONS

- Telecom and Networking Systems
- Base Stations
- Industrial Systems
- Servers & Storage

All MPS parts are lead-free, halogen-free, and adhere to the RoHS directive. For MPS green status, please visit the MPS website under Quality Assurance. "MPS" and "The Future of Analog IC Technology" are registered trademarks of Monolithic Power Systems, Inc.

QUICK START:

1. Connect the positive and negative terminals of the load to the VOUT and GND pins, respectively.
2. Preset the power supply output between 4V and 16V, and then turn off the power supply.
3. Connect the positive and negative terminals of the power supply output to the VIN and GND pins, respectively.
4. Before turn the power supply, choose the suitable Fsw by Jumper connector (JP1).
5. Turn the power supply on. The board will automatically start up.
