

DESCRIPTION

The EVM3810-QB-00A is used for demonstrating the performance of MPS's MPM3810 a low voltage high switching frequency step-down switcher with built-in power MOSFETs and power inductor. MPM3810 provides up to 1.2A peak highly efficient output with constant-on-time control for fast loop response.

High power efficiency over a wide load range is achieved by scaling down the switching frequency at light load to reduce the switching related loss by constant on time control. Short circuit and thermal shutdown provides reliable, fault-tolerant operation.

MPM3810 is available in QFN 3.0x2.5x0.9mm package.

QUICK START GUIDE

1. Connect the positive and negative terminals of the load to the VOUT and GND pins, respectively.
2. Preset the power supply output between 2.5V and 6V, and then turn off the power supply.
3. Connect the positive and negative terminals of the power supply output to the VIN and GND pins, respectively.
4. Turn the power supply on. The board will automatically start up.

LAYOUT RECOMMENDATION OF MPM3810

Proper layout of the switching power supplies is very important, and sometimes critical to make it work properly. Especially, for the high switching frequency converter, if the layout is not carefully done, the regulator could show poor line or load regulation, stability issues.
