EVQ2177-LE-00A

5.5V, 1A, 2.4MHz, Synchronous Step-Down Converter with PG and SS Evaluation Board, AEC-Q100 Qualified

DESCRIPTION

The EVQ2177-LE-00A is an evaluation board designed to demonstrate the capabilities of the MPQ2177, a monolithic, step-down switch-mode converter with integrated internal power MOSFETs.

The EVQ2177-LE-00A achieves 1A of continuous output current (I_{OUT}) across a 2.5V to 5.5V input voltage (V_{IN}) range, with excellent load and line regulation. The output voltage (V_{OUT}) can be regulated to as low as 0.6V. Fault protections include cycle-by-cycle current limiting and thermal shutdown.

The EVQ2177-LE-00A is a fully assembled and tested evaluation board. It generates a 1.2V V_{OUT} at load currents up to 1A across a 2.5V to 5.5V V_{IN} range.

The MPQ2177 is available in a compact QFN-8 (1.5mmx2mm) package.

QUICK START GUIDE

1. Preset the power supply between 2.5V and 5.5V.
2. Connect the power supply terminals to:
   a. Positive (+): VIN
   b. Negative (-): GND
3. Connect the load terminals to:
   a. Positive (+): VOUT
   b. Negative (-): GND
4. After making connections, turn on the power supply.
5. To use the enable function, apply a digital input to the EN pin. Drive EN above 0.9V to turn the regulator on; drive EN below 0.65V to turn it off.
6. The external resistor divider sets the output voltage (V_{OUT}). To adjust the MPQ2177's output, set the feedback resistor (R5) to be between 10kΩ and 100kΩ. R6 can then be calculated using Equation (1):

$$R6 = \frac{R5}{\frac{V_{OUT}}{0.6} - 1} \quad (1)$$

Table 1 shows the recommended resistor values for common output voltages.
