EVQ8612-L-12-00A

High Efficiency, 12A, 6V Synchronous Step-down Converter Evaluation Board

The Future of Analog IC Technology

DESCRIPTION

The EVQ8612-L-12-00A is an evaluation board for the MPQ8612GL-12, a high efficiency monolithic synchronous step-down converter.

The Evaluation Board can deliver 12A continuous load current from a 3V to 6V input with excellent load and line regulation.

Constant-On-Time (COT) control mode provides fast transient response and eases loop stabilization.

The Evaluation Board can be turned on or shut down via a remote ON/OFF input that is reference to ground. This input is compatible with popular logic devices.

QUICK START GUIDE

1. Connect the positive and negative terminals of the load to the VOUT and GND pins respectively.
2. Preset the output of power supply between 3V and 6V, and then turn off the power supply.
3. Connect the positive and negative terminals of the power supply output to the VIN and GND pins respectively:
4. Turn the power supply on. The MPQ8612GL-12 will automatically start up.
5. To use the Enable function, apply a digital input to the EN pin. Drive EN higher than 2V to turn on the regulator or less than 0.4V to turn it off.
6. Use R1 and R2 to set the output voltage within VFB=0.6V. Follow the Application information section in the device datasheet to select the proper value of R1, R2, inductor and output capacitor values when output voltage is changed.
7. If low ripple at light loads is needed, then use TOKO 1.2μH or 1.5μH L1. But with the larger L1, the transient response peak to peak value will become larger too.
