

## DESCRIPTION

The MP62130/MP62131 Power Distribution Switch features internal current limiting to prevent damage to host devices due to faulty load conditions. The MP62130/MP62131 Analog switch features 90mΩ on-resistance and operates from 2.7V to 5.5V input. It is available with a guaranteed current limit, making it ideal for load switching applications. The MP62130/MP62131 has built-in protection for both over current and increased thermal stress. For over current, the device will limit the current by changing to a constant current mode.

As the temperature increases as a result of short circuit, the device will shut off. The device will recover once the device temperature reduces to approx 120°C.

The MP62130/MP62131 is available in MSOP8 and SOIC8 packages.

## FEATURES

- 500mA Continuous Current
- Accurate Current Limit
- Output Discharge Function
- 2.7V to 5.5V Supply Range
- 95μA Quiescent Current
- 90mΩ MOSFET
- Thermal-Shutdown Protection
- Under-Voltage Lockout
- 8ms FLAG Deglitch Time
- No FLAG Glitch During Power Up
- Reverse Current Blocking
- MSOP8 and SOIC8 Packages

## APPLICATIONS

- Smartphone and PDA
- Portable GPS Device
- Set-top-box
- USB Power Distribution

\*MPS<sup>®</sup> and "The Future of Analog IC Technology" are Trademarks of Monolithic Power Systems, Inc.

## TYPICAL APPLICATION

\*EN is active high for 62131  
SINGLE-CHANNEL

### ORDERING INFORMATION

Part Number	Enable	Switch	Maximum Continuous Load Current	Typical Short-Circuit Current @ T <sub>A</sub> =25°C	Package	Top Marking	Free Air Temperature (T <sub>A</sub> )
MP62130ES	Active Low	Single	500mA	650mA	SOIC8	MP62130	-20°C to +85°C
MP62130EK*					MSOP8	62130	
MP62131ES	Active High				SOIC8	MP62131	
MP62131EK*					MSOP8	62131	

\* For Tape & Reel, add suffix –Z (e.g. MP62130/MP62131EK–Z).

For RoHS Compliant packaging, add suffix –LF (e.g. MP62130/MP62131EK–LF–Z);

### PACKAGE REFERENCE

### ABSOLUTE MAXIMUM RATINGS <sup>(1)</sup>

IN .....	-0.3V to +6.5V
EN, FLAG, OUT to GND .....	-0.3V to +6.5V
Continuous Power Dissipation (T <sub>A</sub> = +25°C) <sup>(2)</sup>	
MSOP8 .....	0.83W
SOIC8.....	1.4W
Junction Temperature.....	150°C
Lead Temperature.....	260°C
Storage Temperature.....	-65°C to +150°C
Operating Junct. Temp (T <sub>J</sub> ).....	-20°C to +125°C

### Thermal Resistance <sup>(3)</sup>

	$\theta_{JA}$	$\theta_{JC}$
MSOP8 .....	150 .....	65... °C/W
SOIC8.....	90 .....	42... °C/W

#### Notes:

- Exceeding these ratings may damage the device.
- The maximum allowable power dissipation is a function of the maximum junction temperature T<sub>J</sub> (MAX), the junction-to-ambient thermal resistance  $\theta_{JA}$ , and the ambient temperature T<sub>A</sub>. The maximum allowable continuous power dissipation at any ambient temperature is calculated by P<sub>D</sub> (MAX) = (T<sub>J</sub> (MAX)-T<sub>A</sub>)/ $\theta_{JA}$ . Exceeding the maximum allowable power dissipation will cause excessive die temperature, and the regulator will go into thermal shutdown. Internal thermal shutdown circuitry protects the device from permanent damage.
- Measured on JESD51-7 4-layer PCB.

**ELECTRICAL CHARACTERISTICS <sup>(4)</sup>**
 **$V_{IN}=5V$ ,  $T_A=+25^{\circ}C$ , unless otherwise noted.**

Parameter	Condition	Min	Typ	Max	Units
IN Voltage Range		2.7		5.5	V

**Notes:**

- 4) Production test at  $+25^{\circ}C$ . Specifications over the temperature range are guaranteed by design and characterization.
- 5) Measured from 10% to 90% output signal.
- 6) Measured from 50% EN signal to 90% output signal.

## PIN FUNCTIONS

Pin #	Name	Description
1	$\overline{\text{EN}}^*$	Enable Input. Active High(MP62131); Active Low(MP62130)
2	$\overline{\text{FLAG}}$	IN-to-OUT Over-current, active-low output flag. Open-Drain.
3	GND	Ground.
4, 5	NC	
6, 8	OUT	Power-Distribution Switch Output.
7	IN	Input Voltage. Accepts 2.7V to 5.5V input.

## TYPICAL PERFORMANCE CHARACTERISTICS

$T_A = +25^\circ\text{C}$ , unless otherwise noted.

Figure 2—Functional Block Diagram

## DETAILED DESCRIPTION

### Over Current

When the load exceeds trip current (minimum threshold current triggering constant-current mode) or a short is present, MP62130/MP62131 switches into to a constant-current mode (current limit value). MP62130/MP62131 will be shutdown only if the overcurrent condition stays long enough to trigger thermal protection.

Trigger overcurrent protection for different overload conditions occurring in applications:

- 1) The output has been shorted or overloaded before the device is enabled or input applied. MP62130/MP62131 detects the short or overload and immediately switches into a constant-current mode.
- 2) A short or an overload occurs after the device is enabled. After the current-limit circuit has been tripped (reached the trip current threshold), the device switches into constant-current mode. However, high current may flow for a short period of time before the current-limit circuit can react.
- 3) Output current has been gradually increased beyond the recommended operating current. The load current rises until the trip current threshold is reached or until the thermal limit of the device is exceeded. The MP62130/MP62131 is capable of delivering current up to the trip current threshold without damaging the device. Once the trip threshold has been reached, the device switches into its constant-current mode.

### Flag Response

The FLAG pin is an open drain configuration. This FAULT will report a fail mode after an 8ms deglitch timeout. This is used to ensure that no false fault signals are reported. This internal deglitch circuit eliminates the need for extend components. The FLAG pin is not deglitched during an over temperature or voltage lockout.

### Thermal Protection

The purpose of thermal protection is to prevent damage in the IC by allowing excessive current to flow and heating the junction. The die temperature is internally monitored until the thermal limit is reached. Once this temperature is reached, the switch will turn off and allow the chip to cool. The switch has a built-in hysteresis.

### Under-Voltage Lockout (UVLO)

This circuit is used to monitor the input voltage to ensure that the MP62130/MP62131 is operating correctly. This UVLO circuit also ensures that there is no operation until the input voltage reaches the minimum spec.

### Enable

The logic pin disables the chip to reduce the supply current. The device will operate once the enable signal reaches the appropriate level. The input is compatible with both COMS and TTL.

### Output Discharge

The part involves a discharge function that provides a resistive discharge path for the external output capacitor. The function will be active when the part is disabled (Input voltage is under UVLO or enable is deasserted) and it will be done in a very limited time.

### APPLICATION INFORMATION

#### Power-Supply Considerations

A 10 $\mu$ F bypass capacitor between IN and GND, close to the device, is recommended. Placing a high-value electrolytic capacitor on the output pin(s) is recommended when the output load is

heavy. This precaution reduces power-supply transients that may cause ringing on the input. Optionally, bypassing the output with a 0.01 $\mu$ F to 0.1 $\mu$ F ceramic capacitor improves the immunity of the device to short-circuit transients.
