

The Future of Analog IC Technology®

MP62351 3.3V/5V, Dual-Channel, 500mA Current-Limited Power Distribution Switches With Output Discharge

DESCRIPTION

The MP62351 Power Distribution Switch features internal current limiting to prevent damage to host devices due to faulty load conditions. The MP62351 analog switch has 85mΩ on-resistance and operates from 2.7V to 5.5V input. It is available with guaranteed current limits, making it ideal for load switching applications. The MP62351 has built-in protection for both over current and increased thermal stress. For over current, the device will limit the current by changing to a constant current mode.

As the temperature increases as a result of short circuit, then the device will shut off. The device will recover once the device temperature reduces to approx 120°C.

The MP62351 included a discharge function that provides a resistive discharge path for the external output capacitor when the part is disabled.

The MP62351 is available in 8-pin SOIC packages.

FEATURES

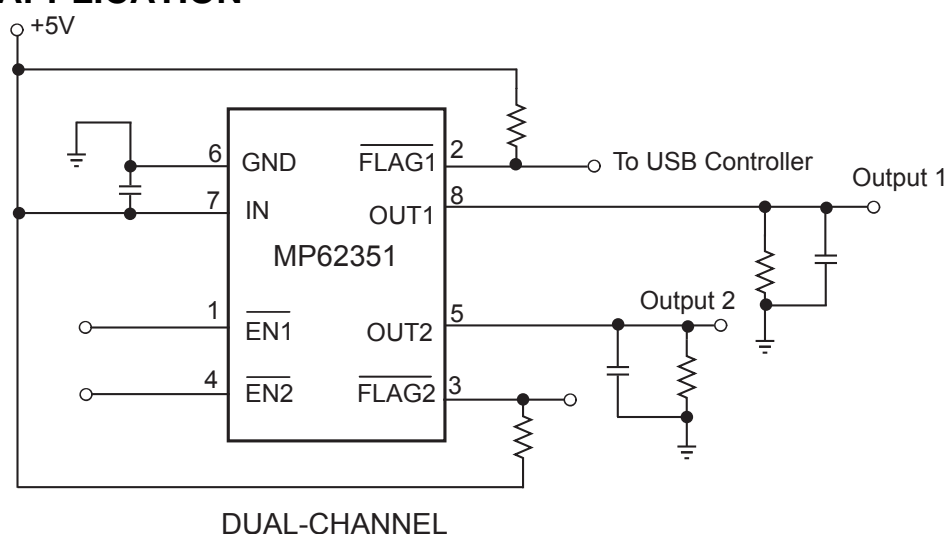

- 500mA Continuous Current
- Accurate Current Limit
- Output Discharge Function
- 2.7V to 5.5V Supply Range
- 140uA Quiescent Current
- 85mΩ MOSFET
- Thermal-Shutdown Protection
- Under-Voltage Lockout
- 8ms FLAG Deglitch Time
- No FLAG Glitch During Power Up
- Reverse Current Blocking
- Active High & Active Low Options
- UL Recognized: Pending

APPLICATIONS

- Smartphone and PDA
- Portable GPS Device
- Notebook PC
- Set-top-box
- Telecom and Network Systems
- PC Card Hot Swap
- USB Power Distribution

"MPS" and "The Future of Analog IC Technology" are Registered Trademarks of Monolithic Power Systems, Inc.

TYPICAL APPLICATION

ORDERING INFORMATION

Part Number	Enable	Switch	Maximum Continuous Load Current	Typical Short-Circuit Current @ T _A =25°C	Package	Temperature
MP62351ES	Active High	Dual	0.5A	750mA	SOIC8	-20°C to +85°C

* For Tape & Reel, add suffix -Z (eg. MP62351ES-Z). For RoHS Compliant Packaging, add suffix -LF (eg. MP62351ES-LF-Z)

PACKAGE REFERENCE

ABSOLUTE MAXIMUM RATINGS ⁽¹⁾

IN	-0.3V to +6.0V
EN, FLAG, OUT to GND	-0.3V to +6.0V
Continuous Power Dissipation (T _A = +25°C) ⁽²⁾	
SOIC8	1.4W
Junction Temperature	150°C
Lead Temperature	260°C
Storage Temperature	-65°C to +150°C
Operating Temperature	-20°C to +85°C

Thermal Resistance ⁽³⁾

	θ_{JA}	θ_{JC}
SOIC8	90	42 ... °C/W

Notes:

- Exceeding these ratings may damage the device.
- The maximum allowable power dissipation is a function of the maximum junction temperature T_J(MAX), the junction-to-ambient thermal resistance θ_{JA} , and the ambient temperature T_A. The maximum allowable continuous power dissipation at any ambient temperature is calculated by P_D(MAX)=(T_J(MAX)-T_A)/ θ_{JA} . Exceeding the maximum allowable power dissipation will cause excessive die temperature, and the regulator will go into thermal shutdown. Internal thermal shutdown circuitry protects the device from permanent damage.
- Measured on JESD51-7, 4-layer PCB.

ELECTRICAL CHARACTERISTICS (4)
 $V_{IN}=5V$, $T_A=+25^{\circ}C$, unless otherwise noted.

Parameter	Condition	Min	Typ	Max	Units
IN Voltage Range		2.7		5.5	V
Supply Current	One Channel Enabled, $I_{OUT}=0$, One Switch ON		90	120	μA
Supply Current	Both Channels Enabled, $I_{OUT}=0$, Both Switches ON		140	160	μA
Shutdown Current	Device Disable, $V_{OUT}=\text{float}$, $V_{IN}=5.5V$		1		μA
Off Switch Leakage	Device Disable, $V_{IN}=5.5V$		1		μA
Current Limit		550		1100	mA
Trip Current	Current Ramp (slew rate $\leq 100A/s$) on Output		1	1.4	A
Under-voltage Lockout	Rising Edge	1.95		2.65	V
Under-voltage Hysteresis			250		mV
FET On Resistance	$I_{OUT}=100mA$ ($-20^{\circ}C \leq T_A \leq 85^{\circ}C$)		85	130	m Ω
EN Input Logic High Voltage		2			V
EN Input Logic Low Voltage				0.8	V
FLAG Output Logic Low Voltage	$I_{SINK}=5mA$			0.4	V
FLAG Output High Leakage Current	$V_{IN}=V_{FLAG}=5.5V$			1	μA
Thermal Shutdown			140		$^{\circ}C$
Thermal Shutdown Hysteresis			20		$^{\circ}C$
V_{OUT} Rising Time, T_r (5)	$V_{IN}=5.5V$, $C_L=1\mu F$, $R_L=11\Omega$		0.9		ms
	$V_{IN}=2.7V$, $C_L=1\mu F$, $R_L=11\Omega$		1.7		ms
V_{OUT} Falling Time, T_f (6)	$V_{IN}=5.5V$, $C_L=1\mu F$, $R_L=11\Omega$			0.5	ms
	$V_{IN}=2.7V$, $C_L=1\mu F$, $R_L=11\Omega$			0.5	ms
Turn On Time, T_{on} (7)	$C_L=100\mu F$, $R_L=11\Omega$			3	ms
Turn Off Time, T_{off} (8)	$C_L=100\mu F$, $R_L=11\Omega$			10	ms
Discharge Resistance			100		Ω
FLAG Deglitch Time		4	8	15	ms
ENx Input Leakage			1		μA
Reverse Leakage Current	$OUTX=5.5V$, $IN=GND$		0.2		μA

Notes:

- 4) Production test at $+25^{\circ}C$. Specifications over the temperature range are guaranteed by design and characterization.
- 5) Measured from 10% to 90%.
- 6) Measured from 90% to 10%.
- 7) Measured from (50%) EN signal to (90%) output signal.
- 8) Measured from (50%) EN signal to (10%) output signal.

PIN FUNCTIONS

MP62351

Pin#	Name	Description
1	$\overline{\text{EN1}}$	Active High: (MP62351)
2	$\overline{\text{FLAG1}}$	IN-to-OUT1 Over-current, active-low output flag. Open-Drain.
3	$\overline{\text{FLAG2}}$	IN-to-OUT2 Over-current, active-low output flag. Open-Drain.
4	$\overline{\text{EN2}}$	Active High: (MP62351)
5	OUT2	IN-to-OUT2 Power-Distribution Switch Output.
6	GND	Ground.
7	IN	Input Voltage. Accepts 2.7V to 5.5V input.
8	OUT1	IN-to-OUT1 Power-Distribution Switch Output

TYPICAL PERFORMANCE CHARACTERISTICS

DETAILED DESCRIPTION

Over Current

When the load exceeds trip current (minimum threshold current triggering constant-current mode) or a short is present, MP62351 switches into to a constant-current mode (current limit value). MP62351 will be shutdown only if the overcurrent condition stays long enough to trigger thermal protection.

Trigger overcurrent protection for different overload conditions occurring in applications:

- 1) The output has been shorted or overloaded before the device is enabled or input applied. MP62351 detects the short or overload and immediately switches into a constant-current mode.
- 2) A short or an overload occurs after the device is enabled. After the current-limit circuit has been tripped (reached the trip current threshold), the device switches into constant-current mode. However, high current may flow for a short period of time before the current-limit circuit can react.
- 3) Output current has been gradually increased beyond the recommended operating current. The load current rises until the trip current threshold is reached or until the thermal limit of the device is exceeded. The MP62351 is capable of delivering current up to the trip current threshold without damaging the device. Once the trip threshold has been reached, the device switches into its constant-current mode.

Flag Response

The FLAG pin is an open drain configuration. This FAULT will report a fail mode after an 8ms deglitch timeout. This is used to ensure that no false fault signals are reported. This internal deglitch circuit eliminates the need for extend components. The FLAG pin is not deglitched during an over temp. or a voltage lockout.

Thermal Protection

The purpose of thermal protection is to prevent damage in the IC by allowing excessive current to flow and heating the junction. The die temperature is internally monitored until the thermal limit is reached. Once this temperature is reached, the switch will turn off and allow the chip to cool. The switch has a built-in hysteresis.

Under-voltage Lockout (UVLO)

This circuit is used to monitor the input voltage to ensure that the MP62351 is operating correctly. This UVLO circuit also ensures that there is no operation until the input voltage reaches the minimum spec.

Enable

The logic pin disables the chip to reduce the supply current. The device will operate once the enable signal reaches the appropriate level. The input is compatible with both COMS and TTL.

APPLICATION INFORMATION

Power-Supply Considerations

Over 10 μ F capacitor between IN and GND is recommended. This precaution reduces power-supply transients that may cause ringing on the input and improves the immunity of the device to short-circuit transients.

In order to achieve smaller output load transient ripple, placing a high-value electrolytic capacitor on the output pin(s) is recommended when the load is heavy.
