

DESCRIPTION

The EV6500-F-00A is an evaluation board for the MP6500GF, a stepper motor driver with a built-in microstepping translator.

It operates from a supply voltage of up to 35V and can deliver a motor current up to 2.5A. It can operate a bipolar stepper motor in full-, half-, quarter-, and eighth-step modes by setting the MS2 and MS1. The input control signals for the MP6500 are applied through the connector, or generated on the board.

QUICK START GUIDE

1. Attach the input voltage ($4.5V \leq V_{IN} \leq 35V$) to the VIN connector, and attach the input ground to the GND connector.
2. To enable the external step signal input from the EXT_STEP connector, switch SW2 to position 3 (top side).
3. Attach the step signal to the EXT_STEP connector.
4. The input control and logic signal can be set either through the CN1 connector, the external MCU, or through SW1 via manual action. Manual action requires an external, 5V VCC voltage to be used as a pull-up power supply.
