

DESCRIPTION

The EVKT-KNOB is an evaluation kit for the MagAlpha magnetic position sensor family. The EVKT-KNOB allows users to run and test the MagAlpha sensor quickly. It is delivered assembled with a knob and magnet. The sensor is mounted in an end-of-shaft configuration.

The EVKT-KNOB is compatible with the MACOM kit, offering seamless connection and operation of the MagAlpha and allowing users to evaluate MagAlpha functionalities and performances, such as noise level, refresh rate, power-up time, magnetic field dependence, and more.

FEATURES

- Ready-to-Use Knob with End-of-Shaft Magnet
- Extra Spacers
- Compatible with MagAlpha Communication Interface Kit (EVKT-MACOM)

APPLICATIONS

- Knobs
- Potentiometer Replacements
- Dials
- Appliances
- Consumer Goods

All MPS parts are lead-free, halogen-free, and adhere to the RoHS directive. For MPS green status, please visit the MPS website under Quality Assurance. "MPS", the MPS logo, and "Simple, Easy Solutions" are registered trademarks of Monolithic Power Systems, Inc. or its subsidiaries.

OVERVIEW

Figure 1: EVKT-KNOB

Board Type

Different board types are available, and each has a different schematic and layout design. Which board type should be used is determined by the selected sensor part number.

Table 1: Board Type

| Kit Part Number | Board Part Number | MPS Chip Part Number |
|-----------------|-------------------|----------------------|
| EVKT800-KNOB | EVMA800-Q-01A | MA800 |
| EVKT820-KNOB | EVMA820-Q-01A | MA820 |
| EVKT850-KNOB | EVMA850-Q-01A | MA850 |

EVKT-KNOB Content

Figure 2: Kit Contents

1. EVMA board with MagAlpha mounted
2. 0.7mm and 2.0mm spacers
3. Knob with magnet
4. Extra cylinder magnet, NdFeB N35 D = 5mm, H = 2.5mm (not shown)

Connector Pin Out

Figure 6: Connector Pin Out Type 2

Table 3: Connector Pin Mapping Type 2

| Pin | Name | Description |
|--------|--------------------|--------------------------------------|
| CN1.1 | VDD | 3.3V supply. |
| CN1.2 | GND | Ground. |
| CN1.3 | CS | Chip select (serial). |
| CN1.4 | SCLK | Clock (serial). |
| CN1.5 | TEST | Test pin. |
| CN1.6 | MOSI | Master out slave in (serial). |
| CN1.7 | MISO | Master in slave out (serial). |
| CN1.8 | MGL ⁽²⁾ | Magnetic level low (option). |
| CN1.9 | | |
| CN1.10 | MGH ⁽²⁾ | Magnetic level high (option). |
| CN1.11 | IO6 ⁽³⁾ | Pin 15 (IO). |
| CN1.12 | IO1 ⁽³⁾ | Pin 1 (IO). |
| CN1.13 | IO5 ⁽³⁾ | Pin 9 (IO). |
| CN1.14 | IO4 ⁽³⁾ | Pin 6 (IO). |
| CN1.15 | IO2 ⁽³⁾ | Pin 2 (IO). |
| CN1.16 | IO3 ⁽³⁾ | Pin 3 (IO). |

NOTES:

- 1) The availability of this option depends of the chip part ID. Please refer to the part datasheet directly.
- 2) Please refer to the chip datasheet directly to know which feature is available on this pin.

MAGNETIC FIELD

An NdFeB cylinder magnet is mounted at the end of the aluminum shaft.

Table 4: Magnet Characteristics

| Material | NdFeB (N35 or N35H) |
|----------------|---------------------|
| Remanence (Br) | 1.2T |
| Diameter | 5mm |
| Height | 2.5mm |
| Magnetization | Diametrical |

How to Change the Mechanical Zero

Unscrew the knob with a 1/16-inch hex key (Allen wrench). Hold the shaft with a pin inserted in the 2mm diameter hole, and rotate the knob to the desired position. When tightening the screw, ensure that the key is fully inserted. Note that the zero position can also be adjusted through programming, as described in the MagAlpha datasheet.

Figure 7: Adjusting the Magnet Angular Position

How to Change the Magnetic Field Amplitude

The performance of the MagAlpha remains the same from 75mT to 150mT and higher (the MagAlpha has no maximum operating field). The critical region is the lower end of the specified range. Some parameters (e.g. noise, linearity) deteriorate gradually when the magnetic field becomes weak. The two spacers enclosed in this evaluation kit allow the sensor (the noise level in particular) to be tested at low magnetic fields.

Figure 8: Magnetic Field vs. Air Gap for the Supplied Magnet

The EVMA nominal magnet sensor distance is 1.5mm, providing a magnetic field of 75mT. With the spacers, the field strength is reduced to 50mT or 25mT (see Table 5).

Table 5: Setting of the Air Gap

| Spacer Thickness (mm) | Air Gap (mm) | Magnetic Field (mT) |
|-----------------------|--------------|---------------------|
| None | 1.5 | 75 |
| 0.7 | 2.2 | 50 |
| 2 | 3.5 | 25 |

Figure 9: Air Gap Setting

MAGNET SUPPLIERS

The table below shows a non-exhaustive list of possible magnet suppliers. The magnetization direction must be chosen carefully given the fact that most magnets sold are axially magnetized, which is not a magnetization direction usually required in magnetic angle-sensing applications. Angle-sensing applications usually use diametrically magnetized magnets.

Maurer Magnetic

Maurer Magnetic has a selection of diametrically magnetized magnets well-suited for contactless rotary angle applications. Samples of the types mentioned below should always be available with no lead time.
